Building Our Future

Toolkit for Mentoring Diverse Students for Dietetics Careers

The ADA Diversity Mentoring Project was made possible by funding from the:
U.S. Department of Health and Human Services
Health Resources and Services Administration
Bureau of Health Professions
Division of Interdisciplinary Community-Based Programs,
Allied Health Branch

©2001 ADA Building Our Future Mentor Program Toolkit
The material in the Building Our Future Mentor Program Toolkit may be reproduced for educational purposes only and should not be made available for purchase by any individual. The credit line on the bottom of each page of the toolkit must be visible on all reproduced materials. To receive a Microsoft Word 97 version of the samples and handouts on computer disk or e-mail, contact the American Dietetic Association, Accreditation, Education Programs, and Student Operations at education@eatright.org or 800/877-1600 ext. 5400.

ADA acknowledges with gratitude the work of Shayne Schneider, Mentors Unlimited in writing this toolkit and her kind permission to reproduce her materials, as stated above.

INTRODUCTION

We are pleased to provide you with the Building Our Future Mentor Program Toolkit. The toolkit is the first step in the American Dietetic Association’s efforts to develop and implement a program for mentoring culturally diverse students into dietetics/nutrition programs.

Summary of ADA Diversity Mentoring Project

ADA members, the largest group of food and nutrition professionals in the world, have the capability of expanding access to nutrition services for diverse populations in a variety of traditional and non-traditional therapeutic and health prevention settings. Toward that end, ADA’s 2000-2003 Strategic Plan includes goals, objectives, and tactics focused on underrepresented groups. The Association has committed to increasing diversity in educational preparation from 20.7% in 1998 to 25.7% by 2004. To meet this goal, ADA recognized the urgent need to try new methods for addressing diversity issues and began the Diversity Mentoring Project with funding from the U.S. Department of Health and Human Services, Health Resources and Services Administration, Bureau of Health Professions, Division of Interdisciplinary Community-Based Programs, Allied Health Branch.

As the Steering Committee, we identified and sought input from experts in cultural diversity, best practices in mentoring programs, and the design of successful training formats. An Invitational Summit on Mentoring and Diversity was held July 6-8, 2001 in Chicago. The Summit convened 40 individuals representing key stakeholders, such as students, educators, and health care and food industry professionals. These forty individual stakeholders became partners in the development of the toolkit.

The Summit was notable for the variety of cultural perspectives, educational expertise and diversity experiences of the participants. Four workgroups discussed goals, outcomes, and strategies for mentoring programs targeted to minority students at various age levels from K-12 to college age. Based on recommendations from the workgroups, the toolkit was developed to provide you with models for mentoring African American, Hispanic, Asian or Pacific Islander, and American Indian, Alaskan Native and Hawaiian Native students.

We hope to inspire you, ADA members in state affiliates, dietetic practice groups, and diversity networking groups, to establish mentoring programs for K-8 and high school students in your communities in order to raise awareness of dietetics careers and increase the pool of potential students from underrepresented groups. We believe mentoring also can be a successful strategy for those of you who are college and university faculty to attract and retain non-declared majors from diverse cultures in dietetics education programs, as well as assist declared dietetics majors from underrepresented groups to successfully complete credentialing requirements.

Additionally, we believe diversity mentoring programs will provide the structure for specific steps to make the field of nutrition and dietetics more visible to K-12 minority students, school communities, and parents, such as visiting schools, providing role
models, and identifying minority spokespersons. We expect other health professions will be able to apply this model, ultimately improving the quality of health care and accessibility of health services within culturally diverse populations.

**How To Use This Toolkit**

This toolkit will enable you to:

- Understand the need for more minority representation in dietetics
- Recognize a variety of effective mentoring models to attract and retain students from underrepresented groups
- Understand the elements of effective practice that apply to all mentoring programs
- Select the program model that is most appropriate for your organization
- Have resources on hand (sample correspondence, forms, etc.) to make it easy to get your program started
- Know where to go for additional information and assistance

The toolkit is organized in two sections. **Section One** provides guidelines that apply to all types of mentoring programs. It is divided into six topic areas separated by gold tabs. **Section Two** provides guidelines specific to mentoring students in different age groups. Blue tabs are used to organize the information specific to each of these age groups.

**Section One** provides background on the critical need for diversity in dietetics in the first gold tab and general information about mentoring in the second gold tab. The remaining gold tabs deal with the important components of mentor programming.

We are assuming that you know relatively little about how to start and run a mentor program. Therefore, the overview of mentoring includes the elements of effective practice. As you design your program, please keep in mind that it’s worth the time to do it right. Use the elements of effective practice in tab 2 as a guide. You will find information on different models of mentor programs (one-on-one, group mentoring, etc) and guidelines on how to decide which type of program is best for you. If you are already familiar with mentor program design, you can just scan the Overview and go on to the third tab. You may want to go back to tabs 1 and 2 from time to time as a reference.

In gold tabs 3-5, we offer you information on the critical steps in every mentoring program: recruitment, screening, training, matching, monitoring, and evaluation. You will find some sample forms that you can use as is or modify to suit your unique needs. These forms include recruitment materials, screening materials, training handouts, and an evaluation form. For easy access, sample forms and handouts are highlighted in *bold italics* in the Table of Contents.

Finally, the sixth gold tab lists resources that can help you: books, articles, websites, and organizations. We also have included brief planning examples for a state affiliate, dietetic practice group (DPG), and/or an educational program with some suggested timelines.

**Section Two** is devoted to mentoring programs for four categories of students, each designated by a blue tab:
• College Students - Declared majors enrolled in dietetics education program accredited/approved by the Commission on Accreditation for Dietetics Education
• College Students – Undeclared majors who can be recruited for dietetics careers
• High School Students
• Elementary School Students

The information in Section Two will help you establish a context for your mentoring program. It also provides specific program design elements (such as the classroom activities for K-8) and information you may wish to share with your mentors. For easy access, handouts are highlighted in bold italics in the Table of Contents. Finally, the last blue tab includes copies of the ADA dietetics career recruitment handouts.

The general information and forms in Section One coupled with the information in Section Two for the group or groups you wish to target are all the tools you need to start your mentoring program.

We hope you find this toolkit useful as you begin mentoring programs in your organizations. We will be asking you to share your successes and suggestions for improving the toolkit with us and ADA staff throughout the coming years.

©2001 ADA Building Our Future Mentor Program Toolkit
Section One: Guidelines for All Mentoring Programs

1. Overview of Diversity

Diversity in Dietetics

Among the total US population, for those reporting one race: 75.1% were White, 12.3% were Black or African American, 0.9% were American Indian or Alaskan Native, 3.6% were Asian, 0.1% were Native Hawaiian or other Pacific Islander, and, 5.5% were some other race; 2.4% reported two or more races. Among the total US population, among all races: 12.5% were Hispanic or Latino and 87.5% were not Hispanic or Latino. (Overview of Race and Hispanic Origin (Census 2000 Brief), US Census Bureau, March 2001)

However, underrepresentation of African Americans, Hispanics, and Native Americans exists in dietetics as well as other health professions. The American Dietetic Association 1999 membership survey results indicate that only 2.4% of registered dietitians (RD) are African American, 2.0% are Hispanic, 5.4% are Asian or Pacific Islanders, and 0.2 % are American Indian, Alaskan Native and Hawaiian Natives. Additionally, 97.4% of dietitians are women.

In all health professions, adequate representation of minority people is necessary for access to and the quality of services for the public. Perceived ethnic and social differences with health care providers often discourage consumers from seeking care or sharing intimate information required for appropriate treatment. Social and ethnic differences between providers and clients can inhibit development of effective treatment plans. These issues are particularly important for us, as dietetics professionals.

We all know that diet is a major factor in prevention and control of chronic diseases, especially obesity, diabetes, and heart disease. Strong evidence supports the need to address these racial and ethnic differences in disease prevalence and health outcomes. Prevention and standard treatment approaches must be tailored to the needs of various patient groups, and food services in many instances must also be geared to the diverse groups.

Obesity

According to the report issued by the National Heart, Lung and Blood Institute of the National Institutes of Health on the evaluation and treatment of obesity in adults, “the need for obesity prevention and treatment is particularly pressing in racial/ethnic minority populations because of the high proportion of overweight and obese persons in many such populations”. Obesity is associated with increased risks of cardiovascular disease and diabetes.

- The prevalence of obesity is much higher in minority women. Among women, 33% of non-Hispanic whites, 52 percent of non-Hispanic blacks, and 50 percent of Mexican Americans are overweight.

- The Strong Heart Study (1995) on risk factors for American Indians found that obesity rates ranged from 54 to 80 % among different tribes.
Diabetes
The complications of diabetes that result from the absence of early treatment are a serious problem for minority populations.

- African Americans experience higher rates of at least 3 of the serious complications of diabetes: blindness, amputation, and end stage renal disease (kidney failure).
- Prevalence of type 2 diabetes among Native Americans in the United States is 12.2% for those over 19 years of age. Among people with diabetes, the rate of diabetic end stage renal disease is 6 times higher among Native Americans. Amputation rates among Native Americans are 3-4 times higher than the general population.
- The prevalence of type 2 diabetes is 2 times higher in Latinos than non-Hispanic whites. 1.2 million or 10.6% of all Mexican Americans have diabetes. The prevalence of diabetic retinopathy in Mexican Americans is 32-40%.

Cardiovascular Disease
- African American men and women are at particular risk for cardiovascular disease (CVD). Racial/ethnic differences are especially pronounced for women. African American women, have coronary heart disease (CHD) and mortality rates 35.3% higher and stroke rates 71.4% higher than for white women.
- Women and Heart Disease: An Atlas of Racial and Ethnic Disparities in Mortality highlights persistent inequalities among women of the major racial and ethnic groups. This report supported the President’s Initiative to Eliminate Racial and Ethnic Disparities in Health. The death rate from heart disease in African American women was 553 deaths per 100,000 population, followed by white women (388 deaths per 100,000 population).

Food Services
In addition to prevention and treatment of chronic disease, another need is to design food and nutrition services in health facilities that are sensitive to ethnic/racial differences. Food served in hospitals, long-term care, and other health care and community-based organizations has become an area of major concern as these institutions compete for clients within an increasingly diverse consumer base. The Joint Commission on Accreditation of Healthcare Organizations (JCAHO) hospital accreditation standards include requirements that the racial and ethnic sensitivities of their patients be addressed in areas of food services, patient communications, and patient education. JCAHO standards encourage hospital staff to work closely with their local communities to identify and address the health care needs of different racial/ethnic groups.

The number of minority students enrolled in undergraduate dietitian education programs offers hope for the future. According to ADA 1999 enrollment statistics, minority students are 23% of total enrollment (6.8% African American, 7.1% Hispanic, 6.2% Asian or Pacific Islanders, and 0.7% American Indian, Alaskan Native and Hawaiian Natives). However, the percentage of minority students enrolled in coordinated programs and postbaccalaureate dietetic internships necessary for credentialing eligibility remains approximately 14% (3.7% African American, 5%
Hispanic, 5.4% Asian or Pacific Islanders, and 0.4% American Indian, Alaskan Native and Hawaiian Natives). These data suggest a disparity between the number of students interested in pursuing dietetics as a career and the number able to complete educational requirements and ultimately obtain the RD credential to practice.

During the 1990s, ADA expressed significant concern regarding the number of minorities in dietetics. Major forums and policy statements by ADA panels stressed the need to respond to an increasingly multicultural society. As recently as August 1999, the ADA commissioned Dr. Howard Greenwald of the University of Southern California to conduct research on why minorities are underrepresented in the dietetics profession and to suggest remedial steps based on successful efforts by individuals and programs to promote minority representation.

**Diversity and Mentoring**

Information obtained from the Greenwald study supports mentoring as a promising means of recruiting and enabling minority people to achieve their potential as dietetics practitioners. Minority RDs most often mentioned personal qualities such as perseverance and study skills as factors that helped them succeed in their training. Closely following personal capabilities were assistance, mentorship, and interest by faculty and preceptors. Education program directors cited establishment of professional networks for recruitment and providing tutoring and visible support for minorities as having positive results.

While mentoring alone will not ensure students’ success, it is a key factor, along with the others listed above. Testimony at the ADA Summit on Mentoring and Diversity provided strong anecdotal support from individual experiences as to the importance of mentoring to students. Mentoring of pre-college students also can have a significant impact on their career choices. For these reasons, we hope you will develop a variety of mentoring programs across the country to attract significant numbers of qualified minority students into the dietetics profession.

When organized formally, mentoring can be a powerful tool to encourage interest in and entrance into a specific profession. For minority students and other targeted groups, mentoring can offer special emphasis on dietetics as a career where their skills are wanted and needed. Mentoring brings dietetics to students’ attention, offers help with their studies when necessary and enhances their chances of securing internships and, ultimately, employment.
2. Overview of Mentoring

Value of Mentoring

Formal mentoring in conjunction with career development is just beginning to be explored. Preliminary results are promising, but there is little formal research. Yet the practice of apprenticing is well documented and appreciated. For thousands of years, crafts and trades people have shared their skills with apprentices, helping them become ready for employment.

In much the same way, mentors can expose young people and young adults to a career. There are many successful professionals who can cite role models or people who encouraged them to achieve—perhaps even guided them to enter a field of study or career. This kind of involvement can be considered informal mentoring.

Academically, mentoring has proven to be valuable. A recent study by Big Brothers Big Sisters showed that young people who met with a mentor three times each month for one year were 52 percent less likely to skip school, 46 percent less likely to begin using illegal drugs, and 33 percent less likely to get into fights. Research from Procter & Gamble’s mentoring program in Cincinnati, Ohio schools showed that of the high school seniors with mentors, 86 percent went on to college. Previously, only between 25 and 30 percent had gone to college. These are just two of a number of studies linking mentoring to improved performance in school. Certainly, a strong grade point average can give students an edge when competing for college acceptance, internships, and jobs.

Mentoring is valuable to mentors, as well. A dietetics practitioner working with students may begin to think about his or her job more critically. The experience can generate new ideas and renew interest and excitement in a career. Mentors also can extend their network of professionals, as dietitians meet other dietitians involved in the program.

Finally, the entire dietetics profession can gain more status and attention through a mentoring program. Media stories can spread awareness of dietetics and its importance in health care. Such awareness could pique interest in students who may explore dietetics as a career and in adults who may want to become mentors. Mentoring programs in dietetics that are successful in attracting and retaining minority students will serve as models for other health care professions where there is also a severe shortage of minority candidates.

Mentor Program Goals

Goals are used to articulate a program’s ultimate achievement — the big picture. The overall goal of ADA’s Building Our Future is:

To increase cultural diversity in dietetics now and in the future by supporting current dietetics majors and developing a pipeline of younger minority students who will be the dietetics majors of tomorrow.
There is an overall goal for mentoring programs geared to each group of students addressed in this toolkit.

For college students who have declared dietetics as their major, the goal is:
To successfully complete a coordinated program in dietetics or a didactic program and a dietetic internship and pass the registration examination for dietitians.

Or

To successfully complete a dietetic technician program and pass the registration examination for dietetic technicians.

For college students who have not yet declared a major, the goal is:
To select dietetics as their major.

For high school students, the goal is:
To go to college and select dietetics as their major.

For students in kindergarten through eighth grade, the goal is:
To have an understanding of and a positive view of the dietetics profession.

**Mentor Program Objectives**

Objectives are the measurable steps a program takes toward achieving a goal. For the diversity mentoring programs described in this toolkit, the objectives differ for each group of students.

For culturally diverse college students who have declared dietetics as their major, the objectives are:
• To help students be academically competitive by identifying his or her learning style and developing study skills. If the student’s learning style does not match the teaching style in the classroom, the mentoring program can help address the differences and find resources so the student can perform at his or her highest level.
• To help culturally diverse students learn networking, presentation, and interviewing skills.
• To introduce culturally diverse students to people in the dietetics profession.
  (Note that this objective does not obligate a mentor to secure an internship or employment for a student. Being an active advocate for a protégé is optional.)

For college students from underrepresented groups who have not declared dietetics as their major, the objectives are:
• To assess the student’s interest in and abilities for dietetics as a career by giving the student a complete picture of the dietetics profession in terms of benefits, rewards, and challenges.
• To guide students in taking the appropriate courses to enter the dietetics program.
• To offer academic support by identifying the student’s learning style and developing study skills so the student can excel. If the student’s learning style does not match the teaching style in the classroom, the mentoring program can help address the differences so the student can perform at his or her highest level.
Overview of Mentoring

To offer encouragement by helping culturally diverse students find job opportunities in the dietetics field. Having dietetics experience can help in securing an internship later.

For culturally diverse high school students, the objectives are:
• To identify students who may be interested in dietetics.
• To present dietetics as a desirable career.
• To guide students in taking the appropriate high school courses to prepare them for college.
• To offer academic support so students can excel.
• To encourage and help students in applying for college and financial aid.
• To help students find summer employment in dietetics or a related field.

For students in kindergarten through the eighth grade, the objectives are:
• To acquaint students with a dietetics professional so they can understand the profession.
• To present a positive view of dietetics through hands-on learning experiences.

Mentor Program Designs
Three mentoring program designs exist: the one-to-one relationship between a mentor and protégé; group mentoring, which matches one or more mentors with a group of protégés; and telementoring, which allows a mentor and protégé to build a relationship via e-mail on the Internet. Each design has advantages and disadvantages (Table 1).

One-to-one mentoring
With this traditional approach, one mentor is matched with one protégé, which allows them to develop a close relationship. The mentor can become a trusted advisor to, as well as an advocate for, his or her protégé. On the other hand, this style is the most expensive to maintain involving increased volunteer time or the indirect costs of faculty time. Training, screening, and ongoing staff support is required. In addition, one-to-one matches occasionally do not work, so the mentor and protégé must be matched with others. Depending on the size of the program, there may not be enough mentors for the number of protégés wanting a match.

Group mentoring
In this approach, one or more mentors works with a group of protégés. Protégés have the flexibility to bond more closely with the adult of their choice. Also, when one mentor or protégé cannot attend a session, the program can continue with the other members of the group. This method is less costly than one-to-one mentoring, and typically it occurs at a supervised site, such as a school, so the safety and liability concerns of one-to-one mentoring do not apply. The drawbacks include not being able to develop strong one-to-one relationships and managing group dynamics so that more extroverted protégés are not the only young people receiving attention. Also, mentors are challenged not to spread themselves too thin, giving protégés less than the attention they need.

Telementoring
This design allows mentors and protégés to develop a relationship via e-mail. It is particularly effective for protégés in rural areas, where population and transportation
can impede a mentoring program — and where there may not be local dietitians available to be mentors. In addition, telementoring can be useful for protégés living in small towns, where everyone knows each other and confidentiality may be breached. Early research results show that boys and inner city protégés feel more comfortable being mentored online, and men are easier to recruit as mentors if the design used is telementoring. Telementoring is not expensive to manage, either. The disadvantages include the lack of a face-to-face relationship and the need for a central message site with a sorting mechanism so that mentor and protégé messages are exchanged only with each other. Even though the Elements of Effective Practices are followed, just as they are in one-to-one and group mentoring, the central message site also archives confidential e-mails so there is a record of the mentor/protégé relationship.

**Elements of Effective Practice**

In 1989, the National Mentoring Partnership and United Way of America convened a representative group of national and community-based nonprofit organizations with significant experience in running mentoring programs. These leaders met regularly to discuss issues and practices that were emerging in their mentoring programs, focusing especially on how to promote the growth of responsible mentoring programs. They defined responsible mentoring programs as those that meet the needs of the protégés and the volunteer mentors.

The collaboration led to the creation of the following elements of effective practice, which have proven to be effective in a wide range of existing mentoring settings.

**Responsible mentoring**

• Is a structured, one-to-one relationship or partnership that focuses on the needs of the mentored participant
• Fosters caring and supportive relationships
• Encourages individuals to develop to their fullest potential
• Helps an individual to develop his or her own vision for the future
• Is a strategy to develop active community partnerships
Overview of Mentoring

A responsible mentoring program requires
- A well-defined mission and established operating principles
- Regular, consistent contact between the mentor and the participant
- Support by the family or guardian of the participant
- Additional community support services
- An established oversight organization
- Adherence to general principles of volunteerism
- Paid or volunteer staff with appropriate skills
- Written job descriptions for all staff and volunteer positions
- Adherence to EEO requirements
- Inclusiveness of racial, economic, and gender representation as appropriate to the program
- Adequate financial and in-kind resources
- Written administrative and program procedures
- Written eligibility requirements for program participants
- Program evaluation and ongoing assessment
- A long-range plan that has community input
- Risk management and confidentiality policies
- Use of generally accepted accounting practices
- A prudent and reasonable rationale for staffing requirements that is based on
  - the organization’s statement of purpose and goals,
  - the needs of mentors and participants,
  - community resources, and
  - skill levels of staff and volunteers

Nuts and bolts checklist for mentoring programs

Does your program have the following?

1. A statement of purpose and long-range plan that includes:
   ✓ Who, what, where, when, why, and how activities will be performed
   ✓ Input from originators, staff, funders, potential volunteers, and participants
   ✓ Assessment of community need
   ✓ Realistic, attainable, and easy-to-understand operational plan
   ✓ Goals, objectives, and timelines for all aspects of the plan
   ✓ Funding and resource development plan

2. A recruitment plan for both mentors and participants that includes:
   ✓ Strategies that portray accurate expectations and benefits
   ✓ Year-round marketing and public relations
   ✓ Targeted outreach based on participants’ needs
   ✓ Volunteer opportunities beyond mentoring
   ✓ A basis in your program’s statement of purpose and long-range plan

3. An orientation for mentors and participants that includes:
   ✓ Program overview
   ✓ Description of eligibility, screening process and suitability requirements
   ✓ Level of commitment expected (time, energy, flexibility)
   ✓ Expectations and restrictions (accountability)
   ✓ Benefits and rewards they can expect
   ✓ A separate focus for potential mentors and participants
   ✓ A summary of program policies, including written reports, interviews, evaluation and reimbursement
4. Eligibility screening for mentors and participants that includes:
✓ An application process and review
✓ A face-to-face interview and home visit
✓ Reference checks for mentors, which may include character references, child abuse registry check, driving record checks and criminal record checks where legally permissible
✓ Suitability criteria that relate to the program statement of purpose and needs of the target population, including personality profile; skills identification; gender; age; language, and racial requirements; level of education; career interests; motivation for volunteering; and academic standing
✓ Successful completion of prematch training and orientation

5. A readiness and training curriculum for all mentors and participants that includes:
✓ Trained staff trainers
✓ Orientation to the program and resource network, including information and referral, other supportive services and schools
✓ Skills development as appropriate
✓ Cultural/heritage sensitivity and appreciation training
✓ Guidelines for participants on how to get the most out of the mentoring relationship
✓ Do’s and don’ts of relationship management
✓ Job and role descriptions
✓ Confidentiality and liability information
✓ Crisis management/problem solving resources
✓ Communications skills development
✓ Ongoing sessions as necessary

6. A matching strategy that includes:
✓ A link with the program’s statement of purpose
✓ A commitment to consistency
✓ A grounding in the program’s eligibility criteria
✓ A rationale for the selection of this particular matching strategy from the wide range of available models
✓ Appropriate criteria for matches, including gender, age, language requirements, availability, needs, interests, preferences of volunteer and participant, life experience, temperament
✓ A signed statement of understanding that both parties agree to the conditions of the match and the mentoring relationship
✓ Prematch social activities between mentor and participant pools
✓ Team building activities to reduce the anxiety of the first meeting

7. A monitoring process that includes:
✓ Consistent, scheduled meetings with staff, mentors and participants
✓ A tracking system for ongoing assessment
✓ Written records
✓ Input from community partners, family, and significant others
✓ A process for managing grievances, praise, rematching, interpersonal problem solving, and premature relationship closure
Overview of Mentoring

8. A support, recognition, and retention component that includes:
   ✓ A formal kick-off event
   ✓ Ongoing peer support groups for volunteers, participants, and others
   ✓ Ongoing training and development
   ✓ Relevant issue discussion and information dissemination
   ✓ Networking with appropriate organizations
   ✓ Social gatherings of different groups as needed
   ✓ Annual recognition and appreciation event
   ✓ Newsletters or other mailings to participants, mentors, supporters, and funders

9. Closure steps that include:
   ✓ Private and confidential exit interviews between participant and staff, mentor and staff, and mentor and participant without staff to debrief the mentoring relationship
   ✓ Clearly stated policy for future contacts
   ✓ Assistance for participants in defining next steps for achieving personal goals

10. An evaluation process based on:
    ✓ Outcome analysis of program and relationship
    ✓ Program criteria and statement of purpose
    ✓ Information needs of board, faculty, administrators, funders, community partners, and other supporters of the program

How to Select the Best Program for Your Organization

In selecting the best program for your organization, ask the following questions:

• What is our program’s goal?
Knowing the outcome that you want from your program gives you a head start on choosing your program design. For example, if your goal is to expose culturally diverse elementary students to dietetics, then group activities can be successful. A dietetics practitioner can visit the classroom in a school with a high minority population monthly for a food demonstration that includes the students as participants. By doing activities and getting information, students will understand dietetics and see that the career can be fun. On the other hand, if your goal is to improve college students’ grade point averages and make internships more accessible to them, then a one-to-one mentoring relationship with a dietitian or dietetic technician is going to be most effective.

• What resources do we have?
After examining your goal, the ideal program design will become clearer. The next step is identifying the resources you need and the resources you have available. If the two are compatible, you are all set. However, if you do not have the resources you need, you must revisit your goal and choose an alternative that can still work within your parameters. For example, telementoring may be the answer for a college student who cannot travel for a face-to-face visit. Mentoring does not have to be an “all or nothing” proposition. You do not have to have a Cadillac in order to have a car.

It is critical to have the support of your members, faculty, and administration for the mentoring program design. Relating the mentoring program to the organization’s
goals will aid in gaining this support. The program must not only have buy-in from the leaders, but also buy-in from the grass roots. When everyone is in agreement, the program will have the funding, promotion, follow through, and enthusiasm to succeed.

**Program Staffing**
A program manager and program assistant can be the same person, but there are enough responsibilities to accommodate two positions.

**Program manager job description**
The mentoring program manager should:
- Establish the mentoring initiative and be responsible for its overall operations.
- Schedule and attend regular and special meetings necessary to the operation of the mentoring initiative.
- Establish and manage the mentoring initiative’s annual budget; oversee the fiscal reporting process.
- Oversee mentor and protégé recruitment, training, screening, matching, recognition, and other aspects of the mentoring process.
- Oversee relationship monitoring and documentation process; be available to help solve problems that arise either in the process or between the mentor and protégé.
- Share information and evaluation results with ADA and the public, as necessary.

**Program assistant job description**
The mentoring program assistant can:
- Provide clerical and administrative support, including report and letter writing; data entry; record, equipment and supplies maintenance; and board support.
- Establish and maintain currency of mentor/protégé documentation format.
- Keep all materials for training current and available.
- Check mentor references and document results.
- Help monitor mentoring pairs and document all contacts with them.
- Offer front-line coverage for telephones and visitors.
- Handle mail distribution (incoming and outgoing).
3. Recruitment and Screening of Mentors

Marketing Your Program

In recruiting mentors for the Building Our Future program, we are looking for quality people who are skilled in the dietetics field, who are committed to it in their careers, who really want to share their knowledge with young people, and who come from a culturally diverse background. Certainly before you can recruit such people, you must get their attention. You have many options at your disposal, and you can use them separately or in combination with one another. These options include telephone contact, e-mail messages, advertising, covering the program in your newsletter, and pitching your local media to do a feature. Some suggestions and sample materials follow.

One helpful hint is to have a distinctive logo, graphic layout, and specific colors to present a consistent, recognizable message. Having a slogan that sticks in people’s minds also delivers your message. Use these elements on your stationary, envelopes, fliers, and brochures to command attention.

Make sure everyone in your organization knows about the mentoring initiative and your need for mentors. Do you sponsor an inclusive event? Use it to make a splashy announcement! Do you have a newsletter? Use it to run an article, photograph and/or “advertisement” about the program! Do you have an e-mail network? Use it to send the message! Think of any communication tool at your disposal, and use it to get the word out.

Letting others know about this mentoring initiative and its importance to the future of dietetics gives them time to absorb its value. Communicating the benefits beforehand is much more effective than contacting those with no background, and your recruiters will thank you for making their job that much easier.

Recruitment Strategy

Influential leaders can help

Look to your board of directors, faculty, or administrators to recruit mentors. Who among them has the most clout? Whose name is recognizable? Who can be most persuasive when asking for help? Who has already been the most supportive of this mentoring initiative? These are the people you should invite to help recruit your pool of mentors.

Make the value of the mentoring initiative clear to your board members, faculty, or administration, and give them the information they need to make their calls. Mentoring offers immense advantages to student— a mentor can provide real-life perspectives about the dietetics field, help academically, and introduce students into a network of dietetics professionals. It also has value for the mentor— students can share their enthusiasm and fresh ideas.

©2001 ADA Building Our Future Mentor Program Toolkit
But, a mentoring initiative has value beyond the personal gains for protégés and their mentors. It is an investment in the future of dietetics as a whole. By guiding and supporting minorities in choosing dietetics as a life-long career, this program will develop the diverse talent that is needed to serve the equally diverse population throughout America.

**Additional Resources**

After the first mentoring programs are implemented, ADA will evaluate the results and provide members with information to use in recruitment. You may have testimonials from mentors and protégés that will be helpful, as well. In addition, former mentors may be willing to help recruit a new group of mentors.

In the meantime, the National Mentoring Partnership’s website, www.mentoring.org, provides information on numerous topics, including recruitment, and connects users with local mentoring partnerships that may have additional useful information and materials.
SAMPLE SCRIPT FOR RECRUITMENT
TELEPHONE CALL

Hello, (FIRST NAME),

This is (FULL NAME). I'm a member of the (Insert organization name). I am calling you about a wonderful investment opportunity, and it doesn't have a thing to do with money. It simply involves your time and talent.

You're probably aware that the field of dietetics is lacking in minority professionals — to the point that we are not able to serve people in (NAME OF STATE) the way we should. So, we've established a mentoring program that introduces dietetics to young people and matches professionals like you with minorities who could consider dietetics as a career.

Obviously, the students get to see what dietetics is all about, and they'll benefit from a relationship with you. We want them to understand that, while dietetics takes a lot of work, it is a rewarding career with many opportunities to grow. The bottom line is that we want to recruit culturally diverse students into our field.

I think you'll enjoy the experience, too. [INSERT PERSONAL MENTORING EXPERIENCE AND HOW REWARDING IT HAS BEEN.] I like hearing about what students are learning in school, and I like giving them a taste of reality.

So, I'm asking you today to be a mentor. You would commit to one school year, and depending on the type of program, you may be able to mentor in person, or you might participate in group mentoring or mentoring by e-mail. We would give you a little training ahead of time to make it that much easier.

Do you have any questions? [ANSWER QUESTIONS.] So, what do you say? Can I count you in?
WE ARE BUILDING
OUR FUTURE!

Can You Help?

The American Dietetics Association has launched a mentoring program to increase cultural diversity in the field of dietetics. We need to expand the cultural diversity in our profession so we can match the cultural diversity of the nation and serve all Americans to the best of our abilities.

(INSERT A PICTURE
OF A CULTURALLY DIVERSE MEMBER)

To succeed, we need mentors! Please share your talent and experience with tomorrow’s dietetics professionals. If you are called, say, “Yes!”

If you want to volunteer,

[GO TO website? INCLUDE A PHONE NUMBER?]
SAMPLE RECRUITMENT LETTER

Dear (FIRST NAME),

I am writing you about a wonderful investment opportunity, and it doesn't have a thing to do with money. It simply involves your time and talent.

You're probably aware that the field of dietetics is lacking in minority professionals — to the point that we are not able to serve people in (NAME OF STATE) the way we should. So, we've established a mentoring program that introduces dietetics to young people and matches professionals like you with minorities who could consider dietetics as a career.

Through this program, students will learn about dietetics, and they will benefit from a relationship with you. We want them to understand that, while dietetics takes a lot of work, it is a rewarding career with many opportunities to grow. The bottom line is that we want to recruit minority students into our field.

I think you would enjoy the experience, too. I certainly have. I like hearing about what students are learning in school and being able to share my experience with them.

Would you consider joining me as a mentor? You would commit to one school year, and depending on the type of program, you may be able to mentor in person, or you might participate in group mentoring or mentoring by e-mail. You would receive training ahead of time to make it that much easier.

I hope you will say “yes” to this investment in the future of dietetics. I look forward to talking with you in the days ahead.

Sincerely,

[NAME]

Eligibility Criteria for Screening Mentors

The screening process is one of the most important elements of a successful mentoring initiative. Obviously, screening is conducted for the protégé's protection.

In the Building Our Future mentoring initiative, as in many programs, screening is the key to making compatible matches between mentors and their protégés, so the relationships have a better chance of success right from the start. The more we know about the mentor's personality, what he or she can offer in the relationship, and what he or she expects from the match, the closer we will come to making everyone happy.

Mentors should

- Be successful, experienced leaders in the dietetics field.
- Understand dietetics from a broad perspective in addition to their own specialties.
- Have strong verbal communication skills.
- Be enthusiastic about working with young people.
- Be culturally sensitive role models.
- Have the time and be willing to commit that time to the relationship.

Timing the Screening Process

The screening process includes interviewing, reference checking, and, in some instances, criminal record checking. You may wish to screen mentors prior to training; but other mentoring programs have found that some mentors screen themselves out of the program once they have been through training, or fail to show up for the training. In those cases, the time and expense of interviewing and screening have been largely wasted. It may be preferable to invite all interested volunteers to attend training prior to any screening activities. That way, they will be able to "self-screen" at training, and you know that everyone who takes the next step is a serious candidate. Either sequence can work, but bear in mind that it may be most efficient to conduct the training first.

Interview Phase

The interview phase is the best opportunity to get to know potential mentors. First, you can discover which candidates will be effective. Second, you can find out the characteristics that will help make a successful match between mentor and protégé.

Getting a profile of your protégés can be helpful in this process, as well. The more you know about your mentors and protégés, the better matches you will make.

Put your applicants at ease in this part of the process by telling them that the interview is designed to help you make better matches, not to screen them out of the program. (If someone needs to be removed, the reference check generally takes care of that.) On the following pages are a sample mentor profile form and format for interviewing potential mentors. These forms should be kept in each mentor's file.

Reference Check Process

A reference check can be used for the protégé’s protection, but for your purposes, the reference check gives you another tool to help make better mentor/protégé matches. Another creative use for the reference check is that it can be a good recruiting tool. If the reference is a dietetics professional, it is possible that he/she may also be willing to mentor.

Reference checks should be done by people who know the potential mentor well — a coworker or friend, for example. As done with the applicants, people called as references should be told that the process is not so much about screening people as it is about getting to know them better.

On the following page is a sample format for documenting reference checks. At least two personal references should be checked, and the completed forms should be kept in the mentor’s file.
SAMPLE REFERENCE CHECK FORMAT

Identify yourself and explain that the applicant has given this person as a reference for volunteer work as a mentor. Describe your program.

How long have you known the applicant?

In what capacity do you know him/her?

How would you describe this person?

Have you had the opportunity to see the applicant interact with young people? If so, describe the experience.

Are you aware of any reason that the applicant should not be paired with a protégé in this program?

Do you feel that the applicant would do well in the mentoring role I have described?

If so, what type of young person do you think the applicant would best relate to?

Is there anything else you can tell me that would help us make the best match for this applicant?

Thank you. Is there additional information you would like about our program?

Criminal Record Checks

A criminal check of potential mentors, conducted with your local police department, will protect your organization and will screen out people who clearly are inappropriate to become mentors. Until recently, many programs avoided police checks because they were time-consuming and, depending upon the jurisdiction, costly. Moreover, mentoring program managers were afraid that volunteers might be put off by having to undergo a police check. However, several high-profile cases of mentors' endangering their protégés, including cases of sexual abuse, have awakened concern among the general public, and parents in particular. More and more programs have determined that it is best practice to conduct a police check on anyone mentoring a minor, and today's volunteers understand and accept the need for this screening.

You must have the potential mentor's written permission to contact the police. After you have received the applicant's police report, keep it in his or her file.

Procedure for Handling Questionable Records

There is no question that anyone who has committed a sex-related or drug-dealing offense must be disqualified from the ADA Building Our Future initiative. However, criminal record checks often show offenses that may or may not have an impact on the applicant's ability to mentor. Likewise, certain questionable offenses may or may not place your organization in legal jeopardy. Refer any queries to your attorney, get a written response, and keep it in your files.

An example would be a conviction for a 25-year-old driving while intoxicated. Was the offense committed when the applicant was in college? What were the circumstances? Was it an isolated offense, or do you have reason to suspect an ongoing problem? With the help of an attorney, you must be prepared to assess this kind of situation and make a judgment call about an applicant's suitability for mentoring.

Making the Cut

As soon as you have completed the screening process and approved your pool of mentors, send them a letter of congratulations. The letter should include:

- A message of welcome from your organization
- A reminder of the date(s) you have scheduled for mentor training
- A mention of how critical it is for them to attend training, especially because it will make the mentoring relationship easier for them and more effective for their protégés
4. Training, Matching, and Monitoring Mentors and Protégés

Goals for Training

Training for mentors gives them a chance to self-screen — to examine what is going to happen in the mentoring relationship and to ask himself or herself, “Is being a mentor really for me?”

Second, training allows mentors to become comfortable with the structure of the Building Our Future program. It teaches them where to begin, how to proceed, and where to turn should any problems arise during their mentor/protégé relationship.

Third, training gives the program manager and mentors a chance to get acquainted with one another so their future interactions can be more personable.

Training for protégés may sound strange to anyone who has not been associated with a mentoring program. Why would a protégé need to be trained? Because, contrary to what people tend to think about mentoring pairs, it is the protégé who drives the relationship.

When protégés attend training, it is an opportunity for them to become fully informed about the commitment they are making and to understand how they can make the best use of the mentoring relationship. Often, young people focus heavily on the advice they will get from their mentors. They think less about the access their mentors can give them — in this case — to others in the dietetics field and the support their mentors can give them by being their advocates. Training also should help protégés understand what they must do to inspire mentors to go the extra mile on their behalf (Table 2).

Look for training resources through a local mentoring partnership, a local mentoring organization such as Big Brothers Big Sisters and the National Mentoring Partnership’s website, www.mentoring.org.

</table>
How to Use the Sample Training Materials

The following sample agendas and handouts can be used in the mentor and protégé training sessions. Additional handouts helpful to mentors can be found in Section II of this toolkit, under the tab specific to an age group. For example, the “Challenges Faced in the Freshman and Sophomore Year” will be useful to mentors of undeclared majors, and the “Developmental Aspects of Adolescence” will help mentors of college students. Items that may be included in training are highlighted in bold italics in the Table of Contents, so you can find what you need quickly.

The first handout, “The Three A’s of Mentoring: Advice, Access and Advocacy” reminds trainees of the key roles of a mentor. They can write notes under each of the 3 A’s.

The second handout, on ranking job priorities, is a good getting-acquainted activity for mentors of any student in high school or older. Define the terms (authority is when you can tell other people what to do, autonomy is when you get to make your own decisions, competence is the satisfaction you get from doing anything well, etc.) and ask the trainees to rank them in order of priority. Emphasize that there are no right or wrong answers. The answers depend on individual personalities and someone’s stage in life. It’s fun to compare notes with a new protégé, and see what their priorities are. A mentor can discuss ways in which the practice of dietetics might fit well with the student’s priorities.

Sensitivity to cultural diversity is critical to the success of a cross-cultural mentoring relationship. Due to the demographics in the profession, it may often be the case that a white mentor will be matched with a minority student. We do not want to stereotype any minority group with certain group behaviors. However, we want every mentor to be aware that for any given behavior, there are cultural as well as individual elements. For example, a shy person may speak very softly. But in some cultures, it is the norm for all communication to take place in a low voice. Likewise, eye contact or lack of it may be the cultural norm. You can’t expect a firm handshake from someone whose culture favors bowing, and has never learned to shake hands “American-style.”

The cultural diversity handout identifies some common behaviors and attitudes that may be misunderstood. I invite the volunteers to think of other such behaviors, and discuss ways they can learn to better understand their protégé’s cultural background. Also, encourage participants to identify at least three behaviors of their own that they think of as “cultural.” Would a person from another culture know that these were cultural norms, or might they interpret these behaviors as personal quirks?

The “Do’s and Don’ts” may look like mere common sense; but this list has been developed after years of observing mentor/protégé pairs that work, as well as those that fail. Try to flesh out the “do’s and don’ts” with concrete examples.

Following the handouts for mentor training are handouts that you can use in protégé training sessions. The first handout is a worksheet that the student can fill out to help focus on his/her own definition of mentoring, and on the specific things a mentor might do. It also reminds the protégé to focus on what the mentor might need and expect in return. You can have students discuss their answers in small groups, followed by a large group debriefing.
SAMPLE AGENDA FOR MENTOR TRAINING SESSION

Topics for Discussion

Welcome and Introductions
  Participants and mentor program committee/volunteer leaders

Program Overview
  Program design and goals

Definition of the Mentor/Protégé Relationship
  Voluntary relationship in which the mentor serves as advisor, advocate and friend

Functions of a Mentor
  Listening, teaching skills, advocacy, exposure to opportunities, increasing protégé's visibility, sharing one's own experience and perspectives

Getting Started
  Self-assessment of motivation, expectations, background, assets, limitations and fears, communication skills

Cultural Diversity

Challenges Faced by Students

Establishing Mutual Expectations for Process and Outcome

Setting Goals

Designing a Work Plan
  Frequency and structure of meetings, tasks to be accomplished, target dates

Pitfalls

CULTURAL AWARENESS

For each of the following behaviors, list possible cultural variations:

- Eye contact
- Handshake
- Tone of voice
- Comfortable physical space between two people
- Inclusion of a new person into a group
- Greeting strangers on the street (yes, no, how?)
- Direct vs. indirect responses to difficult questions
- Treatment of elders (forms of address, etc.)
- Values and attitudes regarding the roles of males and females
- Family values
- Food habits
- Others
MENTOR DO’S AND DON’TS

Do

• Show respect.
• Listen attentively.
• Give honest feedback.
• Keep appointments.
• State clear expectations.
• Maintain confidentiality.
• Learn from your protégé.
• Remember what it was like to be a student.
• Let your protégé know how you’re gaining.
• Remember: a mentor always sets an example.
• Start and end on a positive note.
• Have fun.

Don’t

• Intimidate protégé.
• Jump to conclusions.
• Sugarcoat negatives.
• Act preoccupied.
• Promise what you can’t deliver.
• Reveal confidences.
• Be afraid to explore differences.
• Assume that what works for you works for everyone.
• Give personal advice.
• Put off meetings repeatedly.

PROTÉGÉ DO’S AND DON’TS

Do

• Talk to your mentor.
• Return phone calls.
• Suggest activities you would enjoy.
• Let your mentor know how they can help you.
• Be honest about things you want to do and things you don’t want to do.
• Show up for meetings... on time!
• Call in advance if you have to cancel a meeting.
• Let you mentor know that you appreciate what he/she is doing.
• Show interest in your mentor.
• Explore differences between you and your mentor (age, race, etc.).

Don’t

• Fail to return phone calls.
• Stand your mentor up when you have a meeting scheduled.
• Agree to do something you don’t want to do.
• Wait for your mentor to make every move first.
• Let your mentor set goals for you.
• Allow yourself to be intimidated.
• Avoid communicating about problems.
• Expect your mentor to buy you things.
• Bring friends along when you are meeting your mentor.
• Allow your mentor to touch you in an inappropriate fashion... ever!

Used by permission of Shayne Schneider, Mentors Unlimited.
Criteria for Matching Mentors and Protégés

Matching your mentors with your protégés is the magic moment when you use all the information you have gathered to create the best mentoring pairs possible. Above everything else, you should rely on two things—personality compatibility and what participants expect from their relationships.

The personality factor
Mentors should not be allowed to say they will be happy to mentor whomever needs him or her the most. Encourage people to be honest about whether they would rather work with a shy student or an outgoing student, a creative student or a pragmatic student, etc. Your program needs to make the best matches, not just any matches. Plus, experience shows that there are enough different types of people to accommodate everyone’s needs.

Common expectations
You may be able to match people with the same professional interests so they will share common ground regarding process and outcome.

You also want to consider the time your participants have for this relationship, what kinds of activities they are willing to experience and what they are going to call “success” when the year is over. Knowing these expectations can help you make better matches. In other words, if you have a mentor who is willing to move mountains, then you want to match him or her with a student who wants to go along for the ride.

What about gender?
Certain mentoring situations require same-sex pairs. However, in the Building Our Future initiative, as with other career related mentoring programs, gender is not a factor and should not play a dominant role in matching your mentors with your protégés. However, keep in mind that opposite-sex pairs can present challenges. Use your best judgment in recruiting mentors younger than 30 to work with high school- and college-age students.

Notifying Mentors and Protégés
After you have matched protégés with mentors, send a letter of notification to all. Make sure you include the mentor’s profile in the protégé’s letter and vice versa. Each should have the chance to know something about the other before their first conversation. A sample letter and profile forms follow.
SAMPLE MATCH NOTIFICATION LETTER

Dear [NAME],

I am delighted to tell you that you have been matched with [NAME AND TITLE (for mentors)/SCHOOL AND YEAR (for protégés)] as your mentor/protégé in the [INSERT ORGANIZATION'S NAME] Building Our Future mentoring initiative.

Based on your personalities, common interests, and expectations, we believe this match will lead to a fun and rewarding mentoring relationship. To help in the “getting to know you” phase, I am enclosing your mentor’s/protégé’s profile with this letter. It includes a way to contact your partner, and I encourage you to communicate with him/her soon.

As you know from your training, we are here to answer questions or provide help at any time. We also will be in touch periodically to hear about your mentoring experiences.

All the best as you begin on this exciting journey with your mentor/protégé!

Sincerely,

Monitoring/ Support for Mentor/ Protégé Pairs

Keeping track of your mentoring relationships is important to their health and to the life of your program. Periodic communication gives the mentor and protégé the chance to affirm their progress, as well as ask for help as needed. Knowing what is happening with your mentoring pairs gives your program accountability and a way to evaluate its effectiveness. This information is crucial to the continued funding of the initiative and to the ultimate realization of your goals.

For the first three months, make sure the program coordinator or assistant calls the mentors and protégés once each month. The coordinator should have a check-off form with questions such as those on the sample Activity Report Form on the next page. The conversation should end with a discussion of whether the mentor/protégé agreed to do anything requiring follow-through for his/her next meeting. This gives the coordinator the chance to offer ideas, provide resources, if necessary, and encourage the mentor/protégé to fulfill his/her promise.
SAMPLE ACTIVITY REPORT FORM

Mentor Name ___________________________________________________________

Protégé Name __________________________________________________________

Coordinator Name _______________________________________________________

Date of Contact _________________________________________________________

Have you and your mentor/protégé talked on the phone, e-mailed, met in person?

Have you talked about course choices the protégé is making for school?

Have you talked about time management?

Have you discussed the protégé’s career direction?

Have you talked about places the protégé might go or people he/she might meet relative to the dietetics field?

Have you discussed how you will keep in touch and how often?

Other Issues/Comments/Notes for follow-up:

Used by permission of Shayne Schneider, Mentors Unlimited.
Troubleshooting

It is not unusual during your monitoring calls for mentors and protégés to mention problems that have come up in their relationship. Program coordinators then have the chance to troubleshoot the situation.

The most common problem is having either the mentor or the protégé not be responsive to communication efforts. In that case, the coordinator could call the person not communicating and find out why he/she is not following through with the mentoring commitment. Depending on the answer, the coordinator then must explain the situation to the person not at fault and ask for patience or terminate the relationship.

Problems also arise when expectations are not being met. Typically, these are the expectations that were not divulged to the program coordinator or in the relationship. Perhaps the protégé expects that his/her mentor will get him/her an internship or the mentor expects that his/her protégé is going to perform certain tasks as part of the experience. If no one has discussed these expectations, problems are bound to arise. Again, the program coordinator can help the pair solve their problems or, in certain situations, intervene to get things back on track.

A program coordinator with tact and diplomacy skills is important. Possessing a bit of wisdom does not hurt, either.

Terminating Relationships

If a mentor and protégé agree that their match is not going to work, you need to terminate their relationship.

When the termination is voluntary, simply send a letter, thanking each for participating in the program and saying that their relationship has ended. You also can assess, with the mentor and the protégé, whether they want to be rematched for another mentoring opportunity.

A mentoring relationship can be terminated involuntarily too. This happens when there is a consistent lack of communication between the mentor and protégé or when your program coordinator cannot get in touch with the mentor or the protégé for more than a month. At that time, send a letter to the person at fault, saying that if the program coordinator does not get a call or e-mail within 10 business days, the relationship will be terminated.

Termination is the only alternative, of course, when either the mentor or the protégé exhibits inappropriate behavior. Harassment of any kind would be considered inappropriate. So would sexual behavior or innuendo and ethical or professional violations.
SAMPLE TERMINATION LETTER

Dear [NAME],

Thank you for your willingness to be a mentor/protégé in the [INSERT ORGANIZATION NAME] Building Our Future mentoring initiative. However, because of the circumstances of the match, the relationship with your mentor/protégé has been terminated.

If you wish to discuss your continued involvement in the program, please do not hesitate to call me.

Sincerely,

NAME
TITLE
ORGANIZATION

5. Evaluation, Recognition and Follow Up

Establishing Measures of Success
Most mentoring programs focus more on process than outcome. Yet, programs are evaluated based on outcome, and they are accountable for outcome. So, before your program begins, you must establish measures of success, which are based on your goal(s). Ask the question, “What outcome(s) do we want and expect?” Then, make sure your objectives support the outcome(s) you have chosen.

Note that your evaluation must be practical, based on the size and scope of your program. There is a balance you must find between gathering the necessary information and trying to evaluate every aspect of the process. Again, ask what outcome(s) you want and why.

Documenting Mentor/Protégé Activities
The program coordinator or assistant should contact mentors and protégés on a regular basis, ask questions about the mentoring relationship, and record the answers. When mentoring high school students, there are liability issues, and you must document that you have monitored those relationships. Keep all of your written records, and make sure your documentation continues from the beginning of the program to its end.

This process is much preferred over sending out a survey, which experience has shown may not be returned. A written survey can be useful at the end of the mentoring cycle, however, especially if mentors and protégés are able to complete it at the closing meeting or event.

The following is a sample documentation form.
SAMPLE PARTICIPANT EVALUATION FORM

NAME____________________________________________ DATE________________

Check if you are a: □ mentor  □ protégé

Please answer each of the following questions on a scale of 1 - 5, with 1 being the least and 5 the greatest.

1. Overall satisfaction with the program 1 2 3 4 5
2. Satisfaction with mentor/protégé 1 2 3 4 5
3. Does the program benefit you in your current daily work? 1 2 3 4 5
4. Does the program deepen your understanding of the dietetics profession? 1 2 3 4 5
5. Does the program broaden your perspectives? 1 2 3 4 5
6. Satisfaction with individual support from program manager or coordinator 1 2 3 4 5

Measuring Outcomes

For the Building Our Future diversity mentoring program, a combination of quantitative and qualitative measures is suggested. Examples of quantitative measures would be whether student grade point averages improved or whether students got internships in dietetics or related fields. Examples of qualitative measures would be whether mentor pairs/groups got together and how often, as well as what activities they completed.

Having both kinds of information will give you more insight into your program. You will discover which variables within the program are most valuable. You also will find out whether participants are happy, which is not a program goal but is important to the retention of mentors. Ultimately, having both kinds information will allow you to improve your program, as well as gather success stories and statistics.

Mentor Recognition

Everyone likes to be thanked. They also like to be recognized. We often take for granted that mentors give their time and talents in return for the joy they receive from the mentoring experience. Indeed, they are emotionally rewarded for their mentoring commitment. However, public recognition goes a long way toward recruiting, retaining, and motivating mentors because, by agreeing to volunteer, they become leaders in their fields. They become known for giving back. They are identified as contributing to the growth of the profession.

Never let an opportunity for recognition pass you by. For example, send a letter of recognition from the highest-ranking person in your organization to mentors as soon as their yearly commitment ends. Use an annual meeting or event to recognize your mentors.

Place an advertisement of recognition in local newspapers and magazines, if your budget allows. Recognize mentors in your newsletter with articles about their mentoring activities. Work with your local media to present features about your mentors and protégés on television or in print. Let ADA staff know about your outstanding mentor pairs so they can be promoted in industry trade publications and elsewhere.

Give mentors certificates and other tokens that they can put in their offices. And remember that something enjoyable, such as a mug with the words, “Thank you for mentoring!” and the ADA logo will make the program visible to others.
SAMPLE LETTER OF RECOGNITION

Dear [NAME]:

On behalf of the [ORGANIZATION NAME], I want to thank you for your outstanding efforts as a mentor in our Building the Future Diversity Mentoring Program over this past year. You have made a significant contribution both to the future of your protégé, to the dietetics profession, and to the community at large.

As a busy, successful professional, there are many demands on your time. Yet you have taken the time and energy to reach out to a young culturally diverse person, to help smooth their path to a successful career in dietetics. I am sure you know how much this means to your protégé. The kind of help you offered can be a life-shaping experience.

Your focus was on your protégé, and rightly so. But there is also the big picture— you have made a contribution to our profession by encouraging a minority person to enter the field, thus helping us reach our goal of a more diverse body of dietetics professionals. You have also helped your community. After all, we know that the overall health of the whole community will be best served by dietetics professionals who represent the cultural diversity in that community.

Again, thank you for helping to reach one of the American Dietetic Association’s key strategic goals: to increase diversity in our profession. We could not reach this goal without you. We are grateful for your vision, leadership and energy.

Sincerely,

NAME
TITLE
ORGANIZATION

Used by permission of Shayne Schneider, Mentors Unlimited.
**Long-Term Follow Up**

As part of your evaluation process, make sure that you stay in touch with your protégés long term.

Before they graduate from high school, know where they are attending college. During and after college, confirm a permanent address. Contact protégés within the month following their college graduation to find out whether they have an internship or job, where they are working and whether their address has changed or is going to change.

If a protégé has not gotten an internship or job, keep in contact monthly until he/she is employed. This contact will provide support and the encouragement he/she might need to remain committed to the dietetics profession.

**One-Year Questionnaire**

One year after college graduation, send protégés a short questionnaire with questions such as:

- Where are you interning/working?
- What kind of work are you doing?
- Are you still in touch with your mentor?
- Did you learn anything from your mentor that is helping you succeed in your internship/job? If so, what?

Engaging in long-term follow-up gives you additional evaluative information that can be useful in promoting your mentoring initiative, in recruiting mentors, in grooming former protégés to be future mentors and in working with the media. Staying in touch long term also creates a network of mentors and protégés who can continue being helpful to one another professionally long after their mentoring commitment ends.

Community Organizations

Each community has different mentoring organizations, some of which are only local. Here are some national organizations with many local chapters. Each local chapter is listed in the telephone directory.

State (or City) Mentoring Partnership

Big Brothers/Big Sisters

The Boys and Girls Club

Volunteer Clearing House

PTA

YMCA
SAMPLE TIMELINE FOR PLANNING AND IMPLEMENTING A MENTOR PROGRAM IN AN AFFILIATE OR DPG

Year 1:
• Affiliate/state president or DPG chairperson assigns a Diversity Mentoring Chair (term is open)
• Diversity Mentoring Chair assembles a committee to plan program
• Committee determines age group(s) to focus first year efforts
• Goals could focus on one age group or one geographic area close to your mentor volunteers
  For example, one elementary school to have 4 dietitian visits throughout the year or set up mentor program with local Dietetic Technician Program or Didactic Program in Dietetics.
• Write 3 goals into affiliate/state plan of work or DPG action plan;
• Get Board approval and funding for activities or raise funds from outside sources
• Look at collaborative efforts with another allied health group or community group
• Recruit and train mentors while recruiting students or building community alliances
• Begin program
• Have end of the year social; mentors and protégés fill out evaluation forms
• Committee Chair reports to Board with successes and next steps to expand program
• President or DPG Chair shares successes and improvements with ADA staff

Year 2:
• Evaluate last year and set new goals for program
SAMPLE TIMELINE FOR PLANNING AND IMPLEMENTING A MENTOR PROGRAM IN A DIETETICS EDUCATION PROGRAM

Year 1:
- Program Director assembles a Diversity Mentoring Committee to plan program
- Committee determines goals, objectives, and action plan; gets faculty and administration approval
- Budget funds for activities or raise funds from outside sources
- Look at collaborative efforts with another allied health program or community group
- Recruit and train mentors while recruiting students or building community alliances
- Begin program
- Have end of the year social; mentors and protégés fill our evaluation forms
- Program Director reports to faculty and administration with successes and next steps to expand program
- Program Director shares successes and improvements with ADA staff

Year 2:
- Evaluate last year and set new goals for program
Section Two: Guidelines for Four Distinct Age Groups

1. College — Declared Majors

Section Two provides specific information for each age group. It also includes handouts and training materials for mentors that will supplement the general training materials presented in Section One. Handouts are highlighted in bold italics in the Table of Contents.

Goals and Objectives

The goal in mentoring declared majors is for culturally diverse students

- To successfully complete a coordinated program in dietetics or a didactic program and a dietetic internship and pass the registration examination for dietitians.

Or

- To successfully complete a dietetic technician program and pass the registration examination for dietetic technicians.

The objectives for mentors are

- To help students be academically competitive by identifying his or her learning style and developing study skills. If the student’s learning style does not match the teaching style in the classroom, the mentoring program can help address the differences and find resources so the student can perform at his or her highest level.

- To help culturally diverse students learn networking, presentation, and interviewing skills.

- To introduce culturally diverse students to people in the dietetics profession. (Note that this objective does not obligate a mentor to secure an internship or employment for a student. Being an active advocate for a protégé is optional.)

Challenges for Minority Majors: Student Profiles

As you plan your mentoring program, these interviews with students may give you insight to their perspectives and needs.

Raina Spears, 21 (Choctaw Indian), Senior, Oklahoma State University, Didactic Program in Dietetics

I chose to major in dietetics because I'm very interested in health, nutrition, and how things are changing. What led me into it more than anything is that my grandmother had cancer and passed away two years ago. She fought the disease for ten years before it defeated her, because she had good nutrition habits. It was amazing how she took care of herself that well. I would like to help people. It made me feel that I can go out and help someone.

My ethnic background did have an effect on majoring in dietetics, because many Native Americans have diabetes and it’s very important to keep them aware of
their eating habits. I would like to work with a Native American facility, with people who have cancer or diabetes.

My biggest challenge is keeping up with all the research. Even when I get out that's going to be a big thing—knowing what's accurate and what's not. You really have to focus on your studies. The studies are quite hard, but anyone can do it if they put their mind to it.

I haven't mapped out a plan yet for getting an internship. I will graduate next December, and I would like to do an internship close to home, if possible. Dr. Ebro, my faculty advisor and teacher, will be helping me. There's a place about 30 miles from my home. She will call them and let them know that I'm interested. I'll map out my top three choices, and it will be Dr. Ebro's job to let them know I'm interested and put in a good word for me.

Definitely having a mentor would make a difference. Dr E has not only been a friend, but I have been introduced to other faculty members. And there's tutoring offered. Mentoring has opened many doors to me in furthering my career as a dietitian.

As a dietitian I hope to change many lives. I live what I preach. I enjoy working out and taking care of myself. Helping other people have a healthier life and live longer would be wonderful.

Veronica Diaz, 23 (Mexican-American), Senior, University of Illinois at Chicago, Coordinated Program in Dietetics

I chose to major in dietetics because it's my passion. I've always been involved in the athletic field as well and I think it's a perfect combination. Nutrition and athletics go together hand in hand for performance enhancement and overall health.

My ethnic background did not have any bearing on my choice of dietetics. But now I'm learning more about Mexicans. They are the target people for diabetes and congestive heart disease.

My biggest challenge is being able to balance the fulltime academic load with the internship. What you learn one week you are practicing the next. I'm also pursuing a degree in exercise physiology. School, a one-day-per-week job and social life are very hard to balance. My social life has suffered. It's all worth it because I love the field.

I've mapped out a plan for getting a job. Clinical will be the easiest job to get. I'd like to do part-time clinical while I finish my exercise physiology degree. Colorado, San Diego and Tallahassee have programs in sports nutrition, and I would like to pursue my master's. The Director in Tallahassee told me about their master's with a sports emphasis, and a friend told me about Colorado. The help I can use is out there, the Internet is a great resource. It's just a matter of time.

A mentor would definitely make a difference. It would help me for my future. It would be nice for professors to let me know what they've noticed I'm good at—nutrition science, or research.
All of us young students feel like we can change the world. Realistically we can’t. It’s just my job as an educator to make my knowledge available, but whether people choose to use it is up to them. I hope they will.

Assessment of Student’s Strengths and Weaknesses

Protégés can benefit immensely from examining their strengths and weaknesses so they will have an edge in school, the interviewing process, and beyond. Mentors can provide guidance and support in this area that will be useful to protégés throughout their lives. Remember that the protégé’s personal and cultural traits will come with him or her to the table and that any discussion of those traits must be handled sensitively. Learning to succeed in a business environment may require the protégé to change one or more of his or her behaviors. However, learning to adapt in order to succeed should be viewed as an enhancement to the protégé’s personality, not a comment on personal style or traditions.

Factors that come into play include learning styles, eye contact, firmness of handshake, tone and volume of the speaking voice, directness or obliqueness of responses, and personal space.

Mentors should realize that misunderstandings sometimes occur when a certain behavior means one thing in one culture and something different in another culture. For example, African-Americans tend to interpret close personal space as friendliness, while Caucasians, especially those of European descent, may see it as being “in your face.” In some Asian cultures, young people show respect by casting their eyes downward when talking with an older person. Other cultures may consider this behavior evasive. In America, business etiquette requires a firm handshake; in Thailand, people do not shake hands. However, while noting cultural tendencies, a mentor also must realize that groups of people should not be stereotyped. All individuals are unique and have a variety of experiences they can draw upon.

For these reasons, mentors and protégés should be open-minded about their starting point, knowing that their traits are part of who they are and that almost anyone can build on the positive and adapt to “society’s norms” to achieve success.

Behaviors that can help protégés in an interview, on the job, and with coworkers include:

- Speaking clearly, without using slang
- Having a firm handshake
- Making eye contact
- Maintaining a comfortable personal space
- Using direct, but tactful, communication in which “yes” means yes and “no” means no

Mentors and protégés can discuss these issues and practice specific elements, such as shaking hands. They also can do an exercise in which the mentor identifies certain behaviors and asks how the protégé would handle the situation.
Academic Support

Mentors can provide the academic support that protégés may need to perform to their greatest potential. Finding success can be simple or complicated. In either case, mentors are in an objective position to help students recognize their needs and find the resources to meet them.

All people have a primary learning style that is based on their culture, personality, and psychology. Most people are visual learners, meaning that they learn best through seeing. Some people are auditory learners, meaning that they learn best through hearing. Some people, a smaller group, are kinesthetic learners, meaning that they learn best by doing. Of course, everyone uses each of these learning styles to some extent, but they rely most on their primary learning style.

James Anderson, psychology professor and vice provost of undergraduate affairs for North Carolina State University, talks about students as relational learners or analytical learners. Relational learners are holistic, seeing all information as one picture. They tend to need an example they can relate to in order to understand a concept. Analytical learners focus on details and concepts. They tend not to need peripheral information, such as examples.

It is helpful for mentors and protégés to identify primary learning styles so protégés can compensate for what may not be occurring in class. For example, college professors typically lecture. If the professor is not supporting his or her words with visual cues, the visual learner may be missing the message. A mentor can help his or her protégé in this situation by suggesting that the student take notes during class and even draw pictures to support the notes. For the kinesthetic learner, the mentor and protégé could complete an experiment outside of class—using straw and clay to construct a sugar molecule for science class, for example.

The relational learner could ask the professor for examples, while the analytical learner may need to discuss the concepts being presented. A mentor can help a protégé realize the need to get these kinds of information in order to understand the curriculum.

Another element to consider is learning expectations. A student who expects to memorize information may feel unsure when asked to explore the plot of a novel or the cause of a war. The same is true for the analytical learner who now may be expected to relate concepts to everyday examples. The skills of memorization and analysis are learnable. After a student’s expectations are identified, the mentor can help his or her protégé compensate.

Students who are not performing well in class may have one of these challenges:
- Poor communications skills
- Time management issues
- A learning disability

Together, the mentor and protégé should identify the problem and address it, without embarrassment. There are resources on campus for every situation, and a student’s mentor can help find these resources and be an advocate for his or her protégé.

For poor communicators, there are writing workshops and presentation courses.
Mentors also can work with their protégés to be better speakers and writers (without writing anything that would be considered homework or would be graded). For students with time management problems, mentors can help them set academic priorities and examine how their behavior is affecting their study habits and grades. Together, they can discuss alternatives to procrastination, such as taking control of time instead of just letting things happen last minute or haphazardly. College juniors in Didactic Programs in Dietetics, especially, should set academic priorities and see them through because their junior year grades will be used to compete for Dietetic Internship.

Prioritizing and time management skills also are valuable to students who are attending school (sometimes with an academic load that is too heavy), working, making social engagements and not getting enough sleep—in any combination.

For students with learning disabilities, in reading or math, for example, there should be support on campus. Again, mentors can help protégés locate resources. The challenge is to identify the situation and get help as soon as possible.

Anderson points out that mentors can help students schedule their required courses so they take the easier courses first, while at the same time honing the skills they will need to be successful in the more difficult courses.

**Professional Networking**

Dietetics majors must learn how to make their professional presence known and meet people in the industry. Mentors are key in this respect. They have been chosen as mentors because they are successful on many levels, including the network they can offer to their protégés.

For example, mentors can take their protégés to local, state, and/or regional dietetics meetings and introduce them to other professionals. They can teach their protégés how to talk with as many people as possible in a meaningful way—more than just handing out business cards and asking only what the contact can do for them. Protégés should be prepared to listen actively and talk concisely about their dietetics courses, interest, career plans, etc.

Mentors also can teach protégés how to follow up, for example, by writing a note to specific contacts, thanking them for their time and citing something from their conversation that made an impression.

Professional networking will give protégés numerous perspectives on dietetics and will give them the contacts they need in the future for advice and help in securing internships and/or employment.

**Interviewing Skills**

By the time a protégé is in the final year of the dietetics program, he or she must have solid interviewing skills. Most people will have numerous interviews in their lives, whether simply informational or for a position.

- Informational interviews are for gathering information and professional networking.
Protégés should think of the informational interview as money in the bank—they never know when they may need to make a withdrawal. A protégé should make sure the contact knows he or she is looking, but should never directly ask for a job.

- Job interviews are clearly intended to find the most suitable candidate for an open position.
- Mentors can use the handouts on the next pages to provide their protégés guidance on interviewing strategies.
TIPS FOR INFORMATIONAL INTERVIEWS

An informational interview transmits information both ways, so be prepared to take advantage of both.

- To get the most information about the person/business you are visiting, do your homework in advance. Think of yourself as a newspaper reporter. How would reporter prepare for the interview?
- While you are not interviewing for an open position, you are being assessed (judged), and you never know when that interviewer’s opinion of you might have an impact on your career. Do you look professional? Are you well informed? Are you alert and sharp? Will this person remember you?
- After the informational interview, stay in touch. Apart from your thank-you note, follow up again when you come across some information that might be useful to the person you met. For example, you might read something in the newspaper that relates to his/her business interests. Or you may know someone else that they should meet, for their own benefit.
- Do not confuse a job interview an informational interview. If there’s a job open, and you are interested in it, it is all right to have an informal discussion before you apply formally.

The Informational Interview

Before:
- Define the purpose of the interview. Is it to learn about an area of business, find out about potential for future jobs, learn more about an important area in the organization, or meet a person who has some interesting experiences or insights to share?
- Identify the best person to interview, based on their position, experience, personality, and availability. A mentor can be helpful in finding the right person and making the introduction.
- Prepare for the interview by finding out what you can about the person and his or her work. Don’t ask questions at the interview that you easily could have researched beforehand.
- Ask yourself what the other person might gain from this interview.

During:
- Give a clear and honest picture of what you hope to gain from the meeting.
- Ask pointed, purposeful questions; but leave room for open-ended questions.
- Listen for clues about what this person hopes to gain from the interview.
- Be prepared to tell the person you’re interviewing some information about yourself, your background, and your interests.
- Ask the interviewer if he/she thinks there are other people you should talk to.

After:
- Send a thank-you note.
- Record your impressions and ideas in writing before you forget them.
- Discuss the interview with your mentor, so that you can identify what you have gained and what your next steps should be.

Used by permission of Shayne Schneider, Mentors Unlimited.
TIPS FOR JOB INTERVIEWS

Before the Interview

• Do your homework. Learn about the organization and the person (or persons) who will be interviewing you.
• Have a short, strong description of your experience and your strengths ready to be said at a moment’s notice. Focus on three key points. Be prepared to state your strengths in a way that will be relevant to the job. Also be prepared to identify at least one weakness, but do not volunteer the information unless asked for it.
• Make sure your grooming and wardrobe are ready. Keep it simple, neat, and tasteful. The interviewer should be able to focus entirely on your professional attributes.
• Arrive for the interview early. This will give you a chance to observe the office. Chat with the interviewer’s secretary if you can.

Nonverbal Behavior
The image you project in the first half a minute determines someone’s opinion of you. To be a success on an interview and on the job you should:
• Be on time.
• Smile.
• Have a firm handshake, but not a bone-crushing one.
• Make frequent eye contact.
• Stand and sit tall.
• Don’t fidget.
• Don’t chew gum.

Verbal Communication
• Speak clearly in a pleasant, even tone.
• Practice reflective listening. Make sure you understand what the interviewer is expecting. Be positive. Be sure to start and end conversation on an upbeat note.
• Show the interviewer that you understand his/her business needs and that you can help meet them.
• Ask a pointed, intelligent question about the business when invited to ask questions. Save questions about benefits, vacations, etc., until later.
• Keep your answers concise and to the point.
• Learn to field tricky questions, such as, “Tell me about the worst boss you ever had.”

A Final Note
You will get offered the job if the interviewer is convinced that you can meet his or her needs, not the other way around. From the interviewer’s point of view, the question is whether you are right for the job. If you understand their needs, you can sell yourself effectively.
2. College — Undeclared Majors

Goals and Objectives
The goal for mentoring college students who have not yet declared dietetics as a major is for culturally diverse students
- To select dietetics as their major.

The objectives for mentors are
- To assess the student’s interest in and abilities for dietetics as a career by giving the student a complete picture of the dietetics profession in terms of benefits, rewards, and challenges.
- To guide students from underrepresented groups in taking the appropriate courses to enter the dietetics program.
- To offer academic support by identifying the student’s learning style and developing study skills so the student can excel. If the student’s learning style does not match the teaching style in the classroom, the mentoring program can help address the differences so the student can perform at his or her highest level.
- To offer encouragement by helping culturally diverse students find job opportunities in the dietetics field. Having dietetics experience can help in securing an internship later.

Issues for Minority Students: Student Profiles
As you plan your mentoring program, these interviews with students may give you insight to their perspectives and needs.

Armando Gonzalez, 19 (Latino)
I am a freshman at Bellevue Community College, Washington. I enjoy doing volunteer work in the community, hiking, and hanging out with friends. I also like music.

I think a dietitian is someone who knows about proper eating habits and the way people should eat. Kids, as they get older, don’t eat healthful foods. Some do, because they might have gotten into the habit. But maybe some break away from that, especially as they get busier in high school, and even more so in college.

In order to get kids to eat a healthier diet, we need to get them at a younger age to get and stay in the habit of eating healthier foods. For example, eating trail mix or fruit instead of Jolly Ranchers. Older people know that they need to eat a more healthful diet, especially if their doctor has told them they need to eat healthier. Once people get into the “synch” of things, they start being able to watch what they eat instead of just being in a hurry all the time. Eating healthier foods might make people think about making dietetics a career, but I’m not sure whether thinking “24-7” about diet will make them want to think about it for other people as well. A career in dietetics could help people by making them healthier and not as much at risk for heart disease. Even healthier people have to watch their weight, but not as much as people who are eating fatty, greasy foods.
I would consider studying dietetics in college. One of my biggest reasons would be for personal growth, because I’m not the healthiest eater, but I do want to learn more about what works best and doesn’t. I believe that having a mentor, like a professional or someone in the dietetics field, would make a difference. It might be the encouraging boost you need to get going or to help you learn. It could help you see where that career could take you.

Kim Castro, 21 (Filipino)
I attend the University of Washington in Seattle. I enjoy swimming, skiing, hiking, and walking. I’ve never considered majoring in dietetics. I just never thought about it. I never really thought about what I ate. We ate okay stuff. We ate traditional ethnic food, and a lot of it is similar to Chinese food, but it’s Latin food.

What would encourage me to major in dietetics is knowing that it helps people. I can see that in other countries lots of people are dying at younger ages because of the foods they eat. Having a mentor would definitely help me if I were to major in dietetics. I would need more education on dietetics – I don’t know enough about it to know whether I would want to go into it.

How to Identify and Recruit Potential Dietetics Students
The easiest way to identify potential dietetics majors is to find the freshman and sophomore students, who are taking courses in nutrition, enjoying them, and performing well. The faculty members will be the best resource for identifying students, of course.

In recruiting students as dietetics majors, use sensitivity so that the campaign is not seen as an effort to “steal” students from other programs. However, students need to consider what a career in foods and nutrition will mean to them long term. For example, the student thinking about being a chef may not realize the long hours required (including weekends) for the job, as well as the built-in competitiveness of the career. Dietetics may be a better fit for the life plan they have envisioned.

In addition, find out what the freshmen and sophomores know about dietetics. What is their image of this career? You have an opportunity to present a positive and realistic picture of the field.

One way to expose students to dietetics is to work with faculty members who invite guest speakers into the classroom. This approach is excellent because it not only gives students a chance to learn about dietetics from a professional, but it also allows you to talk about the ADA Building Our Future mentoring program and recruit protégés. It should be made clear, however, that the goal of the mentoring program is to recruit students from underrepresented groups because cultural diversity is disproportionately represented in the profession.

If it is impossible to reserve classroom time for a guest speaker, professors may be willing to arrange a time outside of class for a presentation. For example, the professor may be willing to let students use his or her office or departmental meeting space for a special presentation from a dietetics professional.
Professors also may be willing to share the names of minority students who are taking nutrition courses. Mentoring Committee members then could contact students individually to explain the mentoring program and identify interest. This approach is time consuming, but worth it if there are no other options.

Finally, the organization may have funds that could be earmarked for dietetics scholarships, which always create interest among students.

**Selecting a Program Design**

The ideal mentoring program design for freshmen and sophomores is “one-to-one”, in which mentors meet at least once a month with protégés and maintain telephone contact between meetings. In the first year of the relationship, students should explore the dietetics profession by visiting their mentors in the workplace and receiving academic support and guidance regarding the courses they need to take.

If the number of mentors is limited, group mentoring is acceptable for undeclared majors, as long as the group includes no more than five protégés to one mentor. The most preferable ratio is three protégés to one mentor. (Refer back to the second gold tab for more information on mentoring program designs.)

**Assessment of Student’s Strengths and Weaknesses**

Protégés can benefit immensely from examining their strengths and weaknesses so they will have an edge in school, the interviewing process, and beyond. Mentors can provide guidance and support in this area that will be useful to protégés throughout their lives.

Remember that the protégé’s personal and cultural traits will come with him or her to the table and that any discussion of those traits must be handled sensitively. Learning to succeed in a business environment may require the protégé to change one or more of his or her behaviors. However, learning to adapt in order to succeed should be viewed as an enhancement to the protégé’s personality, not a comment on personal style or traditions.

Factors that come into play include learning styles, eye contact, firmness of handshake, tone and volume of the speaking voice, directness or obliqueness of responses, and personal space.

Mentors should realize that misunderstandings sometimes occur when a certain behavior means one thing in one culture and something different in another culture. For example, African-Americans tend to interpret close personal space as friendliness, while Caucasians, especially those of European descent, may see it as being “in your face.” In some Asian cultures, young people show respect by casting their eyes downward when talking with an older person. Other cultures may consider this behavior evasive. In America, business etiquette requires a firm handshake; in Thailand, people do not shake hands. However, while noting cultural tendencies, a mentor also must realize that groups of people should not be stereotyped. All individuals are unique and have a variety of experiences they can draw upon.
For these reasons, mentors and protégés should be open-minded about their starting point, knowing that their traits are part of who they are and that almost anyone can build on the positive and adapt to “society's norms” to achieve success.

Behaviors that can help protégés in an interview, on the job, and with coworkers include:

- Speaking clearly, without using slang
- Having a firm handshake
- Making eye contact
- Maintaining a comfortable personal space
- Using direct, but tactful, communication in which “yes” means yes and “no” means no

Mentors and protégés can discuss these issues and practice specific elements, such as shaking hands. They also can do an exercise in which the mentor identifies certain behaviors and asks how the protégé would handle the situation.

Mentors may benefit from the handout on the next page, which summarizes some of the challenges students face in the freshman and sophomore years.
CHALLENGES IN THE FRESHMAN AND SOPHOMORE YEARS

For incoming college students, and even second year students, there are personal challenges that mentors should understand.

Freshman Year

- Homesickness
- Time management
- Difficulty managing money
- Lack of adequate academic background
- Poor study skills
- Finding and fitting in with friends
- Uncertainty about where to get help

Sophomore Year

- Remaining problems from freshman year
- Financial problems (aid often drops after first year)
- Pressure of balancing school and work
- Uncertainty about original choice of major

3. High School Students

Goals and Objectives
The goal for mentoring high school students is for culturally diverse students to
• Go to college and select dietetics as their major.

The objectives for mentors are
• To identify culturally diverse students who may be interested in dietetics.
• To present dietetics as a desirable career.
• To guide students in taking the appropriate high school courses to prepare them for college.
• To offer academic support so students can excel.
• To encourage and help students in applying for college and financial aid.
• To help students find summer employment in dietetics or a related field.

Minority Students in High School Today: Student Profiles
As you plan your mentoring program, these interviews with students may give you insight to their perspectives and needs.

Abby Sanders, 16 (African-American)
I am a Junior at Woodrow Wilson High School in Washington, D.C., where I live with my parents and my twin sister. I am active in sports, and I am planning on a career as a fashion designer.

I think a dietitian is a person, a doctor, who tells you how to eat correctly. I know a couple of kids who eat really well but mostly its donuts, starburst, coffee, peanut butter and jelly sandwiches and McDonald’s…

Kids don’t eat healthy diets because a lot of the time we have a lot of things to do, like schoolwork and friends. You eat because you’re hungry and a lot of times you don’t have time to sit down and have dinner. You just eat whatever you can to stop being hungry anymore. Most of the time that’s fast food or a candy bar…

I definitely wasn’t aware of how good a lot of other stuff tasted until I had to eat it. Like dried fruit is really good… With African American kids it has a lot to do with what parents buy. They try and buy the cheapest products. A lot of times instead of buying cereal bars and stuff that has tons of sugar, you can buy fruit. If they’re that hungry they’re going to eat it, and that will become their habit.

I would only study dietetics in college if it became a really big problem for me, or if I wanted to change the foods I eat. Having a mentor might make a difference, but if I really had a goal, probably not. Dietitians can help the world. Most of the time a lot of people who don’t eat healthy foods don’t eat healthy throughout their lives… I don’t think she’s really aware of that. If dietitians had a school assembly for an hour or so to talk about eating habits, then if people were informed, maybe the next time they picked up a candy bar they would think twice.
Monty Singh, 16 (East Indian)
I am a Junior at Bellevue High in Washington. I enjoy singing and playing basketball.

A dietitian is somebody who helps people out with food and nutritional habits. These days, I don’t think kids eat healthful foods because they are out of shape. I’m not the perfect eater either, but I do burn it off. To get kids to eat healthier, we try explaining to them all the time. I don’t think it makes a difference what ethnic group you are, just as long as you’ve got the knowledge.

I think I’m going to become a psychologist. What would encourage me to major in dietetics would have to be some kind of personal experience, like, when you see that someone is unhealthy. It would have to affect me in some deep way. I guess having a mentor in the dietetics profession would make a difference because there’s nothing wrong with learning more about eating healthy. A career like dietetics could help people change the world, because only the strong survive. If more people are eating healthy, more people are living longer. You’ll be more fit and healthier.

Assessment of the Student’s Strengths and Weaknesses

Protégés can benefit immensely from examining their strengths and weaknesses so they will have an edge in school, the interviewing process, and beyond. Mentors can provide guidance and support in this area that will be useful to protégés throughout their lives.

Remember that the protégé’s personal and cultural traits will come with him or her to the table and that any discussion of those traits must be handled sensitively. Learning to succeed in a business environment may require the protégé to change one or more of his or her behaviors. However, learning to adapt in order to succeed should be viewed as an enhancement to the protégé’s personality, not a comment on personal style or traditions.

Factors that come into play include learning styles, eye contact, firmness of handshake, tone and volume of the speaking voice, directness or obliqueness of responses, and personal space.

Mentors should realize that misunderstandings sometimes occur when a certain behavior means one thing in one culture and something different in another culture. For example, African-Americans tend to interpret close personal space as friendliness, while Caucasians, especially those of European descent, may see it as being “in your face.” In some Asian cultures, young people show respect by casting their eyes downward when talking with an older person. Other cultures may consider this behavior evasive. In America, business etiquette requires a firm handshake; in Thailand, people do not shake hands. However, while noting cultural tendencies, a mentor also must realize that groups of people should not be stereotyped. All individuals are unique and have a variety of experiences they can draw upon.

For these reasons, mentors and protégés should be open-minded about their starting point, knowing that their traits are part of who they are and that almost anyone can build on the positive and adapt to “society’s norms” to achieve success.
Behaviors that can help protégés in an interview, on the job, and with coworkers include:

- Speaking clearly, without using slang
- Having a firm handshake
- Making eye contact
- Maintaining a comfortable personal space
- Using direct, but tactful, communication in which “yes” means yes and “no” means no

Mentors and protégés can discuss these issues and practice specific elements, such as shaking hands. They also can do an exercise in which the mentor identifies certain behaviors and asks how the protégé would handle the situation.

**Working With School Administrators**

The key to a successful mentoring program in high schools is to have buy in from principals and guidance counselors or faculty members who will be responsible for day-to-day program operation. As leader of the school, the principal must give the program his or her seal of approval. After that point, he or she probably will not be involved extensively.

The *Building Our Future* mentoring program manager for your organization should meet the other school representatives involved and give them a clear understanding of the program and the roles different people will play. Be upbeat and positive about the commitment the school is making, and trust that the people in charge have the appropriate skills to do the job. Expect that not everyone will be enthusiastic about the assignment; give them time and the special attention they may need to want to succeed. A poor relationship with any school personnel involved in the mentoring program will guarantee failure.

After everyone in the high schools is on board, do three things:

- **Be clear about roles and when things should happen.** An understanding of how things work and who does what will make participants more comfortable, and it will give them a sense of ownership in the program.
- **Tell them you will make the program as easy for them as possible.** Remember that this may not be the only program from an outside organization that the high school is conducting.
- **Present the model of the program you see as ideal, but be open to modifications school personnel may need to fit their curriculum, time frame, etc.** Working as a partnership will be more successful than anything else.

Then, consider the following:

- **Timing**—If you want to start the mentoring program at the beginning of the school year, meet with the principal the previous spring. Adequate lead-time gives principals and staffs a chance to digest the information and plan.

- **Workload**—Find out what other extracurricular programs the high schools are conducting so you will know whether they are overwhelmed with partnerships. Assess with the principals how much time the schools have for the mentoring program, what they will be willing to do, and what they must do (for example, some situations require mentors to meet with protégés on school property).
Do not over demand. Make administering the program as easy as possible. For example, if the school has students who do not speak English as a first language, make sure your materials are translated into the appropriate languages. Do not expect the schools to do the translations.

- **Measures of success**—What outcomes are most desirable for this segment of your program? Share them with the high school administrators. For example, if academic improvement is a measure of success, you may need to negotiate what student grades are available to you. Individual grades may be confidential, but schools may be able to provide pooled (averaged) grades. Also discuss when grades are available so that your time frame corresponds to a deadline the schools are able to meet. Keep school administrators updated on the progress of the mentoring program. Make sure they know everything that is happening.

- **Specificity**—Be specific about what you need and expect from the schools throughout the year. Ask them to be just as specific with you. Make sure there is an action plan and people who are accountable. During the spring, while you are planning together for the school year ahead, make sure the mentoring program calendar coordinates with school calendars so there are no conflicts with teacher in-service days, holidays, etc. Only when everyone has signed off on the plan can you expect them to comply.

- **Recognition**—Never let an opportunity to recognize the high schools pass you by. For example, feature programs and people in your newsletter. Use photos and quotes. Coordinate local media interest in your mentoring program. Recognize school personnel in the mentoring program during the holidays with an event or a gift, such as a poinsettia, so they will be motivated to continue following the holiday break. Invite school personnel to your regional dietetics conference. Ask them to be guest speakers and talk about the program’s success in their schools. Be creative with ideas for recognition; everyone likes to be thanked!

### Developing Partnerships with Community Groups and Parents

In addition to working with high schools, you also can partner with community groups and parent organizations to obtain the resources that can make your program even more successful. Although every city and town has different service organizations, community groups such as the Boys and Girls Clubs, and parent-teacher groups, such as PTA, may have materials and other resources that could be helpful.

If you plan to work with another organization, make sure your goals and values are compatible. To find the groups in your community with an interest in mentoring, log on to The National Mentoring Partnership’s Web site at www.mentoring.org.

### Engaging Adolescents in Career Planning

When children are young, we ask them, “What do you want to be when you grow up?” They feel a certain pressure to have an answer, even at the age of 5. The truth is that most children do not know what they want to do because they are too young and have not experienced enough to make a decision. It is rare that a child has a career passion, even by the age of 15.
Mentors can help adolescent protégés acknowledge their uncertainty about choosing a career. In some cases, teens will declare that a certain profession, such as being a doctor or a fashion designer, is their choice for the future. However, when the mentor begins asking questions, he or she may find that the protégé has no real interest in or knowledge about the career. The mentor may even find that the protégé’s choice is an idea left over from childhood.

The next step in talking about career planning with adolescents is to do an interest and skills inventory. Discuss the things your protégé does well and the things your protégé is interested in, at school and during spare time. Some skills, such as communicating effectively, being organized, and being able to set priorities, are beneficial in business; yet adolescents typically have not been told that these abilities are valuable.

After an interest and skills inventory is done, a mentor and protégé can begin talking about which careers fit the profile. For our purposes, this inventory may reveal skills in the protégé, which would be useful in the dietetics profession. If so, mentors should offer the protégé the opportunity to “job shadow” and give him or her some concrete experience in the dietetics field. Mentors also may be able to introduce their protégés to other dietetics practitioners with different perspectives. Then, the mentor can discuss the protégé’s questions and observations.

Mentors may find the handouts that follow helpful in understanding and communicating with high school students.
DEVELOPMENTAL ASPECTS OF ADOLESCENCE

This chart of characteristics should not be interpreted rigidly. It simply provides clues about what is most likely to occur at a specific age. Because of individual differences, behaviors may occur earlier or later than indicated, or perhaps not at all.

COMMUNICATING WITH TEENAGERS

- **Develop an active listening style.** Do not interrupt when your protégé is talking to you. Maintain open, positive body language (no arms crossed in front of your chest, for example). Respond in a nonjudgmental way so the communication between you and your protégé will remain open.

- **Use reflective communication.** After your protégé has told you something, paraphrase and repeat what you have heard. For example, your protégé says, “My mother is driving me crazy!” You paraphrase and say, “I hear you’re having some trouble with your mother.” This response shows your protégé that you are listening, give your protégé a chance to correct something you might have misunderstood, and keeps the conversation open and moving.

- **Ask open, rather than closed, questions.** An open question, such as “What do you think about the new football coach at school?” gives your protégé a chance to give an opinion, and it may open a discussion between the two of you. A closed question, such as “Do you like math?” gives your protégé the option of saying only “Yes,” or “No.”

- **Avoid using slang.** Young people develop their own terms and phrases as a way to exclude adults. So if you try to use slang, you will come across as phony. Slang changes quickly, as well, so even if you think you are using it correctly, you may be using the wrong terms and phrases. Stick to your own style of speaking.

The best advice in communicating with adolescents is to listen. Research shows that adolescents want adults to listen more than anything else. As a mentor, you cannot give practical advice until you know your protégé, which requires asking questions and listening. Even adolescents who are quiet want a mentor who will listen. The mentor simply has to work harder — asking open questions is a good tactic — to encourage those quiet protégés to open up.

*Used by permission of Shayne Schneider, Mentors Unlimited.*
MENTORS AND PARENTS

Tips for mentors when communicating with parents of protégés.

- The mentor’s primary relationship is with the protégé.

- Introduce yourself to the parent or guardian, by phone, but do not push for a face-to-face meeting. Let the parents make that move.

- Explain your role to the parents.

- Find out what the parents’ expectations and ground rules are.

- If there is a conflict between your understanding of your role and the parents’ expectations, be sure to clarify your role.

- Do not place yourself in a position where the protégé sees you as an agent of the parent. (For example, you are not a disciplinarian.)

- Socialize with the family only so far as it is comfortable for you and your protégé.

- Never undermine the parents or their authority.

Used by permission of Shayne Schneider, Mentors Unlimited.
4. K-8 and Community Outreach

Goals and Objectives
The goal in working with culturally diverse students in K-8 is for the students to
• To have an understanding of and a positive view of dietetics as a profession.

The objectives for the mentors are
• To acquaint students with a dietetics professional so they can understand the profession.
• To present a positive view of dietetics through hands-on learning experiences.

Minority Dietitians of the Next Generation
As you plan your mentoring program, these interviews with students may give you insight to their perspectives.

Symphony Love, 6 (African-American)
I live in Suitland, Maryland with my Mom, and I go to Martin Luther King School.
I am in the first grade. I like school, and my favorite thing is to read. When I come home I like to play. I have a lot of stuffed animals. When I grow up I want to be a ballerina.

I think a dietitian is someone who teaches people how to eat. I think I eat healthy foods. My favorite food is macaroni. I also like noodles. Some kids just eat junk. I think to get them to eat healthier foods you have to teach them to eat right. If people don’t eat the right kind of foods they can get sick. Dietitians can help people by showing them how to eat right and stay more healthy.

I would like to learn about how to make healthy foods at school. That would be fun. Too many people are too fat.

Christian Alves, 10 (African American)
I am in the 5th grade at St. Albans School for Boys in Washington, D.C. There are five in my family if you count the dog: my Dad, Mom, sister, and me. After school, when I have done my homework, I like to ride my bike or my scooter. I like to do lots of stuff outside, or play Nintendo if I’m indoors.

I think a dietitian is a person who looks at people’s diets. I think most kids eat healthy foods. Your parents usually make you eat some broccoli or lettuce. To get kids to eat healthier, find a healthy food they like. I mostly just like fruit. I’m kind of a fruit bat. I like to come down in the middle of the night and eat a plum.

Being a dietitian might be a good career for someone else, maybe if they were all chubby and lost weight on a diet. There’s lots of other things you could do. I want to be a broker or a lawyer.
There was a study that showed that most Americans are overweight. If there were more dietitians, fewer people would be overweight and you wouldn’t see all these fat people running around.

**Program Design**

The most practical program design for elementary students involves presentations with hands-on learning activities that have a “Wow!” factor—activities that get kids excited and engaged. This works best with small to medium sized groups, and may involve parents as well. Normally such programs are coordinated with teachers and presented as enrichment activities during class time, or for after school activities. It is also possible to coordinate these presentations with Girl Scout or Boy Scout troops, and other youth organizations.

One-on-one career-focused mentoring is generally not recommended for elementary school children. When children that age need mentors, it is most likely for social and emotional support, as in the Big Brothers/Big Sisters Programs. However, a dietetics professional may elect to become a “Big” and share some of the dietetics activities with his/her “Little.”

The specific classroom activities included at the end of this section are intended for use with students in K-8, and have been field-tested by members of the ADA Diversity Mentoring Project Steering Committee. Some of the foods may be unfamiliar to children of various backgrounds. While kids are often leery of trying new foods, they are more likely to sample strange delicacies if they have had a hand in the preparation. In the interest of appreciating diversity, you can encourage children of all cultures to become more cosmopolitan in their culinary choices.

**Working Together with School Administrators**

The key to a successful program in elementary and middle schools is to have buy in from principals and guidance counselors or teachers who will be responsible for day-to-day program operation. As leader of the school, the principal must give the program his or her seal of approval. After that point, he or she probably will not be involved extensively.

The *Building Our Future* mentoring program manager for your organization should meet the other school representatives involved and give them a clear understanding of the program and the roles different people will play. Be upbeat and positive about the commitment the school is making, and trust that the people in charge have the appropriate skills to do the job. Expect that not everyone will be enthusiastic about the assignment; give them time and the special attention they may need to want to succeed. A poor relationship with any school personnel involved in the program will guarantee failure.

After everyone in the schools is on board, do three things:

- Be clear about roles and when things should happen. An understanding of how things work and who does what will make participants more comfortable, and it will give them a sense of ownership in the program.
- Tell them you will make the program as easy for them as possible. Remember that this may not be the only program from an outside organization that the school is conducting.
• Present the model of the program you see as ideal, but be open to modifications school personnel may need to fit their curriculum, time frame, etc. Working as a partnership will be more successful than anything else.

Then, consider the following:

• **Timing**—If you want to start the mentoring program at the beginning of the school year, meet with the principal the previous spring. Adequate lead-time gives principals and staffs a chance to digest the information and plan.

• **Workload**—Find out what other extracurricular programs the schools are conducting so you will know whether they are overwhelmed with partnerships. Assess with the principals how much time the schools have for the mentoring program and how it can be best integrated into the curriculum.

• **Measures of success**—What outcomes are most desirable for this segment of the program? There may be more than one, such as introducing students to practicing dietitians or dietetic technicians, giving students a basic understanding of the dietetics profession, and showing students how dietetics affects their lives. Discuss your measures of success with the school administrators. Keep school administrators updated on the progress of the mentoring program. Make sure they know everything that is happening.

• **Specificity**—Be specific about what you need and expect from the schools throughout the year. Ask them to be just as specific with you. Make sure there is an action plan and people who are accountable. Only when everyone has signed off on the plan can you expect them to comply.

• **Recognition**—Never let an opportunity to recognize the schools pass you by. For example, feature programs and people in your newsletter. Use photos and quotes. Coordinate local media interest in your mentoring program. Recognize school personnel in the mentoring program during the holidays with an event or a gift, such as a poinsettia, so they will be motivated to continue following the holiday break. Invite school personnel to your regional dietetics conference. Ask them to be guest speakers and talk about the program’s success in their schools. Be creative with ideas for recognition; everyone likes to be thanked!

## Developing Partnerships with Community Groups and Parents

Remember that in addition to working with schools, you also can partner with community groups and parent organizations to obtain the resources to make your program even more successful. Although every city and town has different service organizations, community groups such as the Boys and Girls Clubs, and parent-teacher groups, such as PTA, may have materials and other resources that could be helpful.

If you plan to work with another organization, make sure your goals and values are compatible. To find the groups in your community with an interest in mentoring, log on to The National Mentoring Partnership’s Website at [www.mentoring.org](http://www.mentoring.org).
Communicating with Children

Based on their stages of development, children in grades K-8 will have a wide range of attention spans, dexterity, and ability to absorb the information presented to them. Learning styles also are important, as all people at any age have a primary way of receiving information.

- **Kindergarten through third grade**
  Expect that children in kindergarten through third grade will have short attention spans. They will only be able to process one or two major points in a single session. However, they will enjoy hands-on activities; so prepare lessons that include simple activities. (Refer to the handouts at the end of this section of the toolkit for ideas).

- **Fourth through sixth grade**
  Children in fourth through sixth grades will have greater attention spans. They will be able to process more information per session and will ask more complex questions, including questions about careers. This group also will enjoy hands-on activities and will be able to discuss the scientific lessons included in each experiment.

- **Seventh through eighth grade**
  Young people in seventh and eighth grades will be capable of discussing all aspects of the dietetics profession. They will be even more interested in dietetics as a career and should be told of the mentoring opportunities ahead for them in high school. Hands-on activities should reflect their age and abilities.

  In all cases, confirm that the teacher will remain in the classroom during your session. The teacher knows each child’s personality and should be responsible for any discipline necessary.

**Learning styles**

All children have a primary learning style that is based on their culture, personality, and psychology. Most children are visual learners, meaning that they learn best through seeing. Some children are auditory learners, meaning that they learn best through hearing. Some children, a small group, are kinesthetic learners, meaning that they learn best by doing. Of course, every child uses each of these learning styles to some extent, but they rely most on their primary learning style.

James Anderson, psychology professor and vice provost of undergraduate affairs for North Carolina State University, talks about students as relational learners or analytical learners. Relational learners are holistic, seeing all information as one picture. They tend to need an example they can relate to in order to understand a concept. Analytical learners focus on details and concepts. They tend not to need peripheral information, such as examples.

Be prepared to help learners of all kinds to understand the lesson. For example, when talking about dietetics, which will reach auditory learners, use photographs and charts to stimulate visual learners. The hands-on activities will make the lesson clearer to kinesthetic learners.

Mentors may find the handouts that follow helpful in understanding and communicating with K-8 students.
DEVELOPMENTAL ASPECTS OF CHILDREN

Understanding the following developmental characteristics will help you communicate more effectively with children.

- Children have a short attention span. Keep your message short and simple.
- Children are concrete thinkers. Get them busy quickly with hands-on activities. Intersperse your talking points with activities.
- Children may be shy with a stranger. Get them busy with the hands-on activities, and they will open up.
- Children have limited vocabularies. Use simple language.

Used by permission of Shayne Schneider, Mentors Unlimited.
CLASSROOM ACTIVITIES

Here is a list of hands-on activities that can be used in the K-8 curriculum to create a “WOW” factor. “WOW” happens when information about food or properties of food not readily observable is revealed to students as a result of their actions.

1. Herman (the carbon dioxide series) sour dough starter

2. Finding fats in food – the Manny FatsEaten and Etta Little story (full lesson follows)

3. Making butter from whipping cream

4. Salad shakers
   a) effect of salt on volume of salad
   b) choosing healthy topping/finding fat on the salad bar

5. Hot roll dough mix
   a) making pretzels shaped in form of their initials
   b) low fat snack food

6. Apple sauce
   a) a naturally sweetened or minimally sweetened dessert
   b) why do things change from solid to soft

7. Peanut butter
   a) foods with hidden fat/watching the oil separate out

8. Yogurt
   a) the carbon dioxide series
   b) make whole milk, 2 percent milk and low fat yogurt, sweeten with lots of fresh fruit (chopped canned or extremely ripe fresh fruit)

9. Ice cream – old fashioned with hand crank
   a) dissolving salt in water changes freezing point
   b) students measure how cold the water gets with thermometer/record data/make graphs using Excel

10. Make fruit slushies or popsicles from fresh fruit
    a) eating more fresh fruit
    b) adding extra sugar makes the slushy softer (extra sugar is not good for people)

11. Making fresh squeezed orange juice or lemonade
    a) How many layers or different types of cells are in an orange rind.
    b) How does “rind” or the skin of an orange protect it
    c) Compare with artificial orange drinks

Approach food companies to secure corporate sponsors for activities. This would give a partnering aspect with industry and reduce cost to the schools. For example:

- McDonalds for salad shakers
- Five-a-day produce for popsicles
- Florida orange growers for fresh squeezed orange juice
- Dairy Manufacturer’s Association for dairy items
- Local food suppliers for fruits and vegetables or salad ingredients
**FINDING FATS IN FOOD – THE MANNY FATSEATEN AND ETTA LITTLE STORY**

**Materials Needed**
Butter flavored Crisco, 1 can
2 paper plates (with a felt pen, write Manny on one plate and Etta on the other)
Measuring spoons (a set or just a tablespoon and teaspoon size)
Plastic tray
Napkins, 3-4
Pencils for each student
Handouts of Finding Fats in Foods

**Lesson Plan**

**Class Audience:** PTA, PTO, health or science class
**Class Time:** 30 minutes

<table>
<thead>
<tr>
<th>TIME</th>
<th>CONTENT</th>
<th>MATERIALS</th>
</tr>
</thead>
</table>
| 2 min. | Introduction: Review the objectives to accomplish in next 30 minutes:  
1. Discover hidden fats in foods.  
2. Open your eyes to just how much fat you can eat and not know it.  
3. Discover how the dietitian can help you understand this and find out that you can be a dietitian, too. | |
| 5 min. | Many of us are eating away from home these days, and when we aren’t making our own food we can’t always tell how much food we are eating. Dietitians are those people who teach you to identify foods that can be high in fat and not have as much nutrition for the calories they have. | |
| 10 min. | “I am a dietitian. If you think you might like to do a job like I do, talk to me after the demonstration.”  
Let’s spend the day with Manny FatsEaten and Etta Little and find out just how much fat they ate one day. Read case study on the handout. Describe the activity.  
Demonstrate the amount of fat eaten from the foods listed on the menu list for each person in the handout. | **Handout:**  
Finding Fats in Foods  
2 paper plates  
Measuring spoons  
Plastic Tray  
Napkins |

continued
FINDING FATS IN FOOD – THE MANNY FATSEATEN AND ETTA LITTLE STORY

TIME | CONTENT | MATERIALS
---|---|---
10 min. | As each food item is discussed, place a teaspoon of shortening on the paper plate to represent the number of teaspoons of fat in that food and have students write it on their handout. At the end of the activity ask participants to add the total teaspoons of fat eaten by the two characters. Compare calories eaten and how it relates to heart disease and diabetes risk. Mention that Manny ate more than one cup of fat in his day and that even though Etta made low fat choices she still ate more than the 30-35 percent of calories from fat recommended. | Plates can be passed to emphasize how much fat it is.

Concepts to Emphasize as the activity progresses:
- Emphasize alternative choices for high fat foods, such as:
  - Boiled vs. fried eggs.
  - Dry toast or use of less fat on toast.
  - Omitting high fat meats at breakfast and eating more whole grain cereals instead.
  - Increasing fruit and vegetable servings throughout the day.
  - Combining breads, fruits and vegetables, which are low fat, with high fat foods to decrease total over the day.
  - Ordering plain hamburger instead of breaded, fried chicken or fish patties. Breading absorbs fat.
  - Ordering skinless breast of chicken.
  - Ordering sandwiches with bun not grilled, holding the mayonnaise or butter.
  - Ordering low fat milk. Describe one cup of skim milk as fat free with about 90 calories, 2 percent as the skim with one pat of butter added, whole milk as one cup of skim with two pats of butter.
  - Eating a smaller serving of chicken (one piece breast instead of 3 pieces).

Emphasize that restaurant eating is usually high fat and includes much larger portions than we need.

Illustrate that what we order in the salad will determine if it is mostly vegetables or fat. The handout salad for Etta is all vegetables. Emphasize this by having students list all zeros and asking why vegetables don’t contain fat.

Ask participants if they would eat what is on the Manny plate with a spoon. We can eat much more fat than we realize when we eat in a restaurant.

Will any of you change the way you order food next time you go out to eat?

Ask students to share ideas.
---
**FINDING FATS IN FOODS**

Manny FatsEaten and Etta Little ate breakfast at home. Manny enjoyed a big breakfast while Etta ate the lighter meal.

At lunchtime they had a sandwich at a local fast food restaurant and then went out for dinner at a restaurant that serves pizza and other meals.

Note: 1 teaspoon of fat = 5 grams of fat. You get nine calories in each gram of fat.

**Write in the number of teaspoons of fat each person ate yesterday:**

Evaluation of the Usefulness of the 
ADA Building Our Future Mentor Program Toolkit

1. Did you use the Building Our Future Toolkit in: Yes No
   Planning □ □
   Recruiting mentors and protégés □ □
   Training mentors and protégés □ □
   Managing and evaluating the mentor program □ □
   Other □ □

2. Please rate the usefulness of the Building Our Future Toolkit on a scale of 1-6, with 1 being not at all useful and 6 being very useful:

   Organizing your mentoring program 1 2 3 4 5 6
   Recruiting mentors 1 2 3 4 5 6
   Recruiting protégés 1 2 3 4 5 6
   Training mentors 1 2 3 4 5 6
   Training protégés 1 2 3 4 5 6
   Managing and evaluating the mentor program 1 2 3 4 5 6
   Sample forms and correspondence 1 2 3 4 5 6

3. Please answer the following:

   What other information should be added to the Building Our Future Toolkit?

   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

   What information is not necessary in the Building Our Future Toolkit?

   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
