RDNs Can Benefit Your Programs

RDNs Improve Health Outcomes
Studies show that individuals with obesity, diabetes, and lipid metabolism disorders who receive medical nutrition therapy (MNT) from Registered Dietitian Nutritionists (RDNs) have better outcomes than those who receive traditional care.1 RDNs partner with community service providers to help children and adults improve their quality of life and achieve better overall health.

RDNs are Essential for Community Health Programs
Intensive lifestyle programs to prevent diabetes led by RDNs get better results, according to a systematic review by the Community Preventive Services Task Force.2,3 RDNs are also uniquely qualified to provide training and oversight to other staff who may be delivering such programs to ensure program integrity.

RDNs are a critical component of effective community-based medically-tailored meal programs. Providing medically tailored, therapeutic meals and nutrition counseling by RDNs decreased monthly healthcare costs by an average of 31% and cut hospitalizations in half compared to patients not receiving these services.4 This translates to an average savings of $13,000 per month, highlighting the efficacy and importance of comprehensive, community-based nutrition services for people with serious illnesses.

Registered Dietitian Nutritionists

Optimizing Health through Food and Nutrition

Registered dietitian nutritionists, or RDNs, are the food and nutrition experts, translating the science of nutrition into practical solutions for healthy living. Working in a number of practice settings, RDNs advance the nutritional status of their patients and clients.

RDNs are recognized as the most qualified food and nutrition experts by the National Academy of Medicine (formerly IOM).¹

Physicians, clients, patients, industry and government agencies value and trust the contributions of RDNs.

Primary care physicians identified dietitians as the most qualified provider to care for patients with obesity.²

70% indicated that RDNs are the most trusted source for information about what types of food to eat.

RDNs receive extensive training that combines academic preparation with hands-on, practical client and patient experience.

- Minimum of a Bachelor’s degree
- Participate in an accredited practice program
- Pass a national registration
- Maintain their credential through continuous education
- Over half of RDNs hold a graduate degree

Registered dietitian nutritionists are everywhere and touch the lives of many.

1.5 BILLION estimated number of clients/patients counseled by RDNs yearly.

Numerous clinical guidelines and the United States Preventive Services Task Force (USPSTF) highlight that RDNs provide nutrition care more effectively at a lower cost than physicians, nurse practitioners, and physician assistants.
