

PRACTICE TIPS: Addressing Food and Nutrition Insecurity

STEPS to identify and address Food Insecurity and Malnutrition

Table of Contents

- Step 1: Review definitions for food and nutrition insecurity and related terms
- Step 2: Understand Academy and other resources to strengthen individual competence related to addressing food insecure populations
- Step 3: Determine if patient/client is food insecure by conducting a food insecurity screening
- Step 4: Identify if additional RDN follow-up is needed and determine nutrition intervention/plan of care
- Step 5: Direct coordination of care by RDN

**All registered dietitians are nutritionists, but not all nutritionists are registered dietitians. The Academy's Board of Directors and Commission on Dietetic Registration have determined that those who hold the credential Registered Dietitian (RD) may optionally use "Registered Dietitian Nutritionist" (RDN) instead. The two credentials have identical meanings. In this Practice Tips, the Quality Management Committee has chosen to use the term RDN to refer to both registered dietitians and registered dietitian nutritionists and to use the term NDTR to refer to both dietetic technician, registered and nutrition and dietetics technician, registered.*

Background:

Food insecurity and malnutrition are widespread and worsening issues in the United States. Both food insecurity and malnutrition are associated with negative health outcomes and higher spending on health care. Adults who are malnourished at the time of hospitalization or surgery are more likely to have worse hospitalization, surgery, and recovery outcomes.¹ Registered dietitian nutritionists (RDNs) have a responsibility to identify and address nutrition and food insecurity.² The following five steps outline a path for RDNs to seize the opportunity to be at the forefront of the identification and interventions for food insecurity and malnutrition.

¹ Malnutrition Quality Improvement Initiative. Briefing: The value of quality malnutrition care. <https://malnutritionquality.org/wp-content/uploads/briefing-the-value-of-quality-malnutrition-care.pdf>. Published 2018. Accessed September 23, 2021.

² Quality Management Committee. Academy of Nutrition and Dietetics Revised 2017 Scope of Practice for the Registered Dietitian Nutritionist. *J Acad Nutr Diet*. 2018; 118(1): 141-165.

Step 1: Review definitions of food and nutrition insecurity and other relevant terms from the Academy's Definition of Terms List (DoT) (not all inclusive).

Term	Definition/Description
Food Insecurity	<p>Food Insecurity is defined as a lack of consistent access to enough food for every person in a household to live an active, healthy life.¹ This may include reports of reduced quality, variety, or desirability, in addition to indications of disrupted eating patterns and reduced food intake.² This can be a temporary situation for a household or can last a long time.¹</p> <p>References:</p>

Term	Definition/Description
	<p>¹What is food insecurity? Feeding America. Accessed September 10, 2021. https://www.feedingamerica.org/hunger-in-america/food-insecurity.</p> <p>²Definitions of Food Security. USDA. Accessed September 10, 2021. https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-us/definitions-of-food-security.aspx.</p>
Nutritional security	<p>Nutritional security is defined as “a situation that exists when all people, at all times, have physical, social, and economic access to sufficient, safe, and nutritious food that meets their dietary needs and food preferences for an active and healthy life.”</p> <p>Reference: Nutritional Security Through Sustainable Agriculture. USDA. Accessed September 10, 2021. https://www.usda.gov/media/blog/2016/05/27/nutritional-security-through-sustainable-agriculture.</p>
Culturally Appropriate Care	<p>Culturally appropriate care is care that responds to the needs of diverse individuals, families and caregivers. Providers must ensure they have adequate and ongoing training in cultural competence to provide culturally appropriate care.</p> <p>Health care organizations and health caregivers need to provide effective, equitable, understandable, and respectful services that are responsive to diverse cultural beliefs and practices, preferred languages, health literacy and other communication needs.</p> <p>Reference: Academy Definition of Terms List. Academy of Nutrition and Dietetics. Accessed September 10, 2021. www.eatrightpro.org/definitions.</p>
Health Disparities	<p>Health disparities are preventable differences in health status linked with inequitable distribution of social, political, economic, educational, medical, and environmental resources which negatively impact health outcomes and are experienced by socially disadvantaged populations.</p> <p>Reference: Academy Definition of Terms List. Academy of Nutrition and Dietetics. Accessed September 10, 2021. www.eatrightpro.org/definitions.</p>
Health Equity	<p>“Equity is the absence of avoidable, unfair, or remediable differences among groups of people, whether those groups are defined socially, economically, demographically or geographically or by other means of stratification. “Health equity” or “equity in health” implies that ideally everyone should have a fair opportunity to attain their full health potential and that no one should be disadvantaged from achieving this potential.”</p> <p>Reference: Academy Definition of Terms List. Academy of Nutrition and Dietetics. Accessed September 10, 2021. www.eatrightpro.org/definitions.</p>

Term	Definition/Description
Social Determinants of Health	<p>Social determinants of health (SDOH) are conditions in the environments in which people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.</p> <p>Reference: Academy Definition of Terms List. Academy of Nutrition and Dietetics. Accessed September 10, 2021. www.eatrightpro.org/definitions.</p>

Step 2: Understand Academy and other resources to strengthen knowledge and individual competence related to addressing populations with food insecurity.

The Academy’s Strategic Plan has a focus area dedicated to the topic of food insecurity- Nutrition Security and Food Safety. Within that focus area, there are impact goals:

- Advocate for equitable access to safe and nutritious food and water
- Advance sustainable nutrition and resilient food system

Step 3: Determine if patient/client is food insecure by conducting a food insecurity screening.

- Utilize a **Validated Food Insecurity Screening Tool** – The purpose of a food insecurity screen is to quickly identify households at risk for food insecurity, allowing providers to target services and interventions that address the health and developmental consequences of food insecurity. The two-item food insecurity screen below is based on Questions 1 & 2 of the U.S. Household Food Security Survey and has been validated for use as a screening tool in the health care setting.

I'm going to read you two statements that people have made about their food situation. For each statement, please tell me whether the statement was **often true**, **sometimes true** or **never true** for your household in the last 12 months.

1. "We worried whether our food would run out before we got money to buy more." Was that **often true**, **sometimes true** or **never true** for your household in the last 12 months?
2. "The food that we bought just didn't last, and we didn't have money to get more." Was that **often**, **sometimes** or **never** true for your household in the last 12 months?

A response of "often true" or "sometimes true" to either question = positive screen for FI.

Hager et al. Development and validity of a 2-item screen to identify families at risk for food insecurity. *Pediatrics*, 2010; 126: e26-e32.

Other Considerations - When screening for food insecurity, it is important to consider additional factors that may contribute to food insecurity when implementing a treatment plan such as:

- Access/food deserts
- Mobility/transportation
- Intellectual and Developmental Disabilities
- Food storage/equipment
- Financial resources

The Academy's electronic Nutrition Care Process and Terminology (eNCPT) (<https://www.ncpro.org/>) has codes to support validated assessment by RDNs indicating food insecurity in addition to codes for food insecurity screening.

- ICD-10-CM code Z659: food insecurity screen has been completed.
- ICD-10-CM code Z59.4: positive screen for food insecurity. Individuals and families who are food insecure may need immediate help with food resources as well as assistance connecting with federal nutrition programs to support ongoing access to healthy food.

The Academy is involved with the [GRAVITY](#) project which represents social determinants of health data, and plays a key role in the development and submission of food insecurity concepts in the external health terminologies of LOINC, SNOMED CT, and ICD-10.

The Centers for Medicare and Medicaid (CMS) has introduced a Food Insecurity and Nutrition Risk Identification Improvement Activity for RDNs practicing in the outpatient setting who participate in MIPS.

For RDNs practicing in the outpatient setting, are you eligible to participate in MIPS? If you are currently billing outpatient Medicare Part B, you may be able to utilize the CMS approved Improvement Activity - [Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols](#).

Learn more about MIPS eligibility at <https://app.cms.gov/mips/how-eligibility-is-determined>.

Step 4: Identify if additional RDN follow-up is needed and determine nutrition intervention/plan of care.

The [Nutrition Care Process \(NCP\)](#) provides a framework and discrete terms for the RDN to assess, diagnose, intervene, and monitor care. The NCP considers the individual/population needs and values and uses the best evidence available to make decisions. Screening and referral and outcomes management are also components of the model. The electronic [Nutrition Care Process and Terminology](#) provides up-to date standardized terminology for documentation of malnutrition diagnoses, supporting evidence and nutrition interventions. <https://www.ncpro.org//default.cfm>

- **Malnutrition/Nutrition Screening Validated Tools**
 - Malnutrition Screening Tool (MST)
 - Malnutrition Universal Screening Tool (MUST)
 - Mini Nutrition Assessment – Short Form (MNA-SF)
 - Short Nutritional Assessment Questionnaire (SNAQ)
 - Mini Nutrition Assessment-Short Form-Body Mass Index (MNA-SF-BMI)
 - Nutrition Risk Screening (NRS-2002)
 - Screening Tool for the Assessment of Malnutrition in Pediatrics (STAMP)

[Academy of Nutrition and Dietetics Position Paper on Malnutrition Screening Tools](#): Provides evidence of specificity and sensitivity for malnutrition screening tools for adults, demonstrating validity and evidence grade for validated screening tools used predominantly in the United States.

“Screening tools are a first-line detection of malnutrition. Only a Registered Dietitian Nutritionist (RDN) is qualified for performing Medical Nutrition Therapy (MNT) inclusive of conducting a Nutrition-Focused Physical Exam (NFPE), determining a nutrition diagnosis, and authorizing appropriate intervention for malnourished individuals.” (https://avalere.com/wp-content/uploads/2018/07/MQC_Malnutrition-Transitions-of-Care-Dialogue-Process-v23_singlepages.pdf)

- **Nutrition Assessment and Reassessment** – The RDN collects and documents evidence such as food or nutrition-related history; biochemical data, medical tests and procedures; anthropometric measurements, nutrition-focused physical findings and client history. Problems

November 2021

may be identified during a nutrition assessment which are outside of the RDN scope of practice leading to referrals to other professionals such as a social worker.

Academy resources that address Nutrition Assessment as it relates to food insecurity and include applicable indicators are:

- Nutrition Care Process Terminology contains validated food insecurity assessment terms (www.ncpro.org)
- Standards of Practice in Nutrition Care (SOP) in Nutrition Care and Standards of Professional Performance (SOPP) for RDNs article ([https://jandonline.org/article/S2212-2672\(17\)31625-8/fulltext](https://jandonline.org/article/S2212-2672(17)31625-8/fulltext))
 - SOP 1.5 Food and nutrition-related history assessment (ie, dietary assessment):
Evaluates:
 - SOP 1.5E Food security defined as factors affecting access to a sufficient quantity of safe, healthful food and water, as well as food/nutrition-related supplies
- Sustainable, Resilient and Healthy Food and Water Systems SOPP for RDNs focus area article ([https://jandonline.org/article/S2212-2672\(20\)30459-7/fulltext](https://jandonline.org/article/S2212-2672(20)30459-7/fulltext)) :
 - SOPP 1.6E1 Screens customers for food insecurity and takes action per protocol

The NFPE is a tool RDNs use to accurately identify and provide a nutrition diagnosis of malnutrition for patients/clients. (<https://www.eatrightpro.org/practice/professional-development/face-to-face-learning/nfpe-workshop>; <https://www.eatrightstore.org/product-type/ebooks/nutrition-focused-physical-exam-pocket-guide-second-edition-ebook>)

- **Nutrition Diagnosis** - Data collected during the nutrition assessment guides the RDN in determining the appropriate nutrition diagnosis or problem that the RDN is responsible for treating. A physician's medical diagnosis describes a disease or pathology of organs or body systems. The nutrition diagnosis may assist in guiding the physician in making a medical diagnosis. The nutrition diagnosis resolves with nutrition intervention.
- **Nutrition Intervention** - The RDN then selects the nutrition intervention(s) with the patient/client/family, when possible, that will be directed to the root cause (or etiology) of the nutrition problem(s) and/or aimed at alleviating the signs and symptoms of each nutrition diagnosis.
 - As part of the nutrition intervention, RDNs provide nutrition education to individuals and the community through in-person or virtual sessions, programs, health fairs, handout materials or other resources.

The following are resources for RDNs to use in nutrition intervention:

- Established Clinical Guidelines (EAL, Consensus)
 - a. EAL - from 2011 on Food Insecurity-
<https://www.andean.org/topic.cfm?menu=3956&cat=4571>
 - b. Nutrition Care Manual (NCM) addresses under Food and Nutrition-Related History: Factors Affecting Access to Food and Food/Nutrition-Related Supplies (FH-6)-
https://www.nutritioncaremanual.org/topic.cfm?ncm_toc_id=272416
 - i. Food insecurity issues

- ii. Eligibility for government programs (FH-6.1.1)
- iii. Participation in government programs (FH-6.1.2)
- iv. Eligibility for community programs (FH-6.1.3)
- v. Participation in community programs (FH-6.1.4)
- vi. Safe food/meal availability (FH-6.2)
- vii. Safe water availability (FH-6.3)
- Academy Malnutrition resources
 - a. Nutrition Care Manual (<https://www.nutritioncaremanual.org/>)
The Adult, Pediatric, and Sports Nutrition Care Manuals are professional practice resources consisting of the largest client education library and current evidence-based nutrition recommendations for adults, infants and children, and athletes. The Nutrition Care Manuals are updated annually and in 2019 the Adult Nutrition Care Manual included a section with all-inclusive guidance for providing malnutrition care.
 - b. Nutrition Care Process and Terminology (www.ncpro.org)
The electronic Nutrition Care Process and Terminology provides up-to-date standardized terminology for documentation of malnutrition diagnoses, supporting evidence and nutrition interventions. The 2015 edition added etiology-based malnutrition diagnosis terms to mirror the *Consensus Statement: Academy of Nutrition and Dietetics and American Society for Parenteral and Enteral Nutrition* (<https://aspenjournals.onlinelibrary.wiley.com/doi/full/10.1177/0148607112440285>) and all eNCP malnutrition terms are mapped to SNOMED-CT for full compatibility with clinical information systems.
 - c. Nutrition Focused Physical Exam Hands-on Training Workshop (<https://www.eatrightpro.org/practice/professional-development/face-to-face-learning/nfpe-workshop>) The Academy offers training for RDNs to accurately identify adult or pediatric patients with, or at risk for, malnutrition, and determine a nutrition diagnosis. While a NFPE is only one component of the nutrition assessment, it can provide necessary supportive data. Pocket guides for both [pediatric](#) and [adult nutrition-focused physical exams](#) are available in eatrightSTORE (<https://www.eatrightstore.org/>)
 - d. *Journal of the Academy of Nutrition and Dietetics* (<https://jandonline.org/>)
The *Journal* publishes a multitude of malnutrition-related content, organized within the following collections:
 - Malnutrition (<https://jandonline.org/content/malnutrition>)
 - Pediatric Malnutrition (https://jandonline.org/pediatric_malnutrition)
 - Adult/Senior Malnutrition (https://jandonline.org/adult_senior_malnutrition)
 - Special Population Malnutrition (https://jandonline.org/special_malnutrition)
- Malnutrition Quality Improvement Initiative (MQii) (<https://malnutritionquality.org/>) The MQii is a project of the Academy of Nutrition and Dietetics, Avalere Health, and other stakeholders who collaborate to provide guidance and expertise for clinical malnutrition.

- a. Dialogue Proceedings (<https://www.eatrightpro.org/news-center/in-practice/research-reports-and-studies/malnutrition-dialogue-proceedings>)
- b. MQii Toolkit (<https://malnutritionquality.org/mqii-toolkit/>)
- c. Electronic Clinical Quality Measures (eQCMs) (<https://www.eatrightpro.org/practice/quality-management/quality-improvement/malnutrition-quality-improvement-initiative>)
- Other association resources
 - a. American Society for Parenteral and Enteral Nutrition (ASPEN) Malnutrition Solution Center (<http://www.nutritioncare.org/Malnutrition/>)
Health care professionals can access malnutrition definitions, a nutrition care algorithm, screening and assessment tools, publications and more via ASPEN's Malnutrition Toolkit. Malnutrition-related online educational opportunities also are available.
 - b. Defeat Malnutrition Today (<http://defeatmalnutrition.today/resources/>)
A coalition including the Academy and many other organizations, Defeat Malnutrition Today emphasizes malnutrition screening and intervention. The website features infographics, articles, studies and the National Blueprint: Achieving Quality Malnutrition Care for Older Adults.
- **Nutrition Monitoring/Evaluation** - The final step of the NCP is monitoring and evaluation, which the RDN uses to determine if the client has achieved, or is making progress toward, the planned nutrition goals. In 2018 the Academy, Avalere Health and the Defeat Malnutrition Coalition engaged in multi-stakeholder dialogue focused on malnutrition quality improvement surrounding care transitions.
 - National Blueprint: Achieving Quality Malnutrition Care for Older Adults, 2020 Update- <https://defeatmalnutrition.today/blueprint>
 - 2018 Dialogue Proceedings / Advancing Patient-Centered Malnutrition Care- https://avalere.com/wp-content/uploads/2018/07/MQC_Malnutrition-Transitions-of-Care-Dialogue-Process-v23_singlepages.pdf
 - A multi-stakeholder group of health and community leaders and advocates came together in a national Dialogue, "Advancing Patient-Centered Malnutrition Care Transitions," to focus on developing real-world solutions to better integrate nutrition risk identification and care into existing care transition pathways and accountable care models. (https://academic.oup.com/innovateage/article/2/suppl_1/328/5168876)

Step 5: Direct Coordination of Care by RDN.

RDNs working in health care settings, e.g., hospitals, long-term care, residential care, or free-standing dialysis facilities need to actively address discharge planning needs directly or in collaboration with a social worker or care coordinator to achieve improved outcomes for patients/clients and the organization, e.g., avoid hospital readmission. Knowledge of community resources including eligibility requirements when applicable would enable dialogue with patients/clients/families to identify the resources that would best meet their needs.

In addition to RDNs working in health care settings, RDNs in community nutrition or population health may need to conduct population health management to achieve improved clinical health outcomes of

November 2021

the community/population. These concepts are supported by multiple focus area Standards of Practice (SOP) and Standards of Professional Performance (SOPP) indicators:

Management of Food and Nutrition Systems SOPP- [https://jandonline.org/article/S2212-2672\(21\)00100-3/pdf](https://jandonline.org/article/S2212-2672(21)00100-3/pdf)

- 5.7B Contributes food and nutrition systems management expertise to community-based organizations, advisory boards or coalitions, nonprofit organizations addressing food system issues (eg, local food system, community health initiatives, food insecurity, equity, sustainability)

Public Health Community Nutrition- SOP SOPP in Nutrition Intervention section- [https://jandonline.org/article/S2212-2672\(15\)01108-9/fulltext](https://jandonline.org/article/S2212-2672(15)01108-9/fulltext)

- SOP 3.10B Collaborates within and across agencies and organizations, including other governmental sectors, nonprofits, community partners, business/insurance companies, industry and coalitions that work on addressing population health issues (eg, disparities in access to food, nutritional intake)

RDNs in population health management follow the NCP at a population level:

- Assess food and nutrition issues,
- Develop a population health plan,
- Implement the plan to obtain desired outcomes, and
- Evaluate and modify the population health plan to enhance health and prevent nutrition-related diseases.
- During this process the RDN coordinates and involves referrals to:
 - Federal Nutrition Programs and Emergency Food Referral Chart for Older Adults: <https://frac.org/wp-content/uploads/Federal-Nutrition-Programs-and-Emergency-Food-Referral-Chart-for-Older-Adults.pdf>
 - Evidence indicates that patients can benefit by increasing enrollment in the Supplemental Nutrition Assistance Program (SNAP) (<https://www.fns.usda.gov/snap/supplemental-nutrition-assistance-program>), which is associated with reduced food insecurity or connecting their patients to other community resources.
 - A Quick Guide to SNAP Eligibility and Benefits: <https://www.cbpp.org/research/food-assistance/a-quick-guide-to-snap-eligibility-and-benefits>
 - Expanded Food and Nutrition Education Program: <https://nifa.usda.gov/program/expanded-food-and-nutrition-education-program-efnep>
 - Food assistance programs (i.e., Special Supplemental Nutrition Program for Women, Infants, and Children [WIC], Supplemental Nutrition Assistance Program [SNAP])
 - Food banks
 - Community-based programs
 - Congregate meals or home-delivered meals programs
 - Lyft Grocery Access Program: <https://www.lyft.com/lyftup/grocery-access>
 - Instacart Senior Support Service: <https://www.instacart.com/help/section/360007797972/360052851231>

November 2021

- Appropriate practitioner/provider
 - Social Worker
 - Case Manager
 - HUD (Housing and Urban Development)
 - RDN to organize their community resource contact list
 - Community programs providing direct services
