MQii Tools Support Care across the Care Continuum

Malnutrition eCQMs Align with the Malnutrition Care Workflow

Screening Nutrition screening using a validated tool for all patients 18+ with a hospital admission	Assessment Nutrition assessment using a standardized tool for all patients 65+ identified as at- risk for malnutrition	Diagnosis Documentation of nutrition medical diagnosis for all patients 65+ identified as malnourished	Establishment of a nutrition care	Intervention Implementation of a nutrition care plan including treatment for all patients identified as malnourished or at-risk for malnutrition**	Monitoring/ Evaluation & Discharge Planning Implementation of processes, including discharge planning, that provide ongoing monitoring and support the care of patients identified as malnourished or at-risk for malnutrition**
---	---	---	-----------------------------------	--	---

The MQii is rooted in patient-driven nutrition efforts that incorporate patient preferences and risk factors; four eCQMs were developed to assist providers to monitor performance on the four steps in the workflow highlighted above

**Measures for intervention implementation, monitoring/evaluation, and discharge planning were not technically feasible due to limitations in the availability of measure data.
