

MALNUTRITION CARE SCORE (CMS986v5)

Possible Combinations of Measure Observations and the Expected Total Malnutrition Care Score as a Percentage

Important: (1) This table is not comprehensive; there may be scenario combinations that are possible but not reflected in this document. (2) This table assumes admission as an inpatient visit of a patient aged 18 years or older, with a length of stay of 24 hours or more, as well as without a discharge disposition for hospice care or a hospice care order during the visit. (3) For Measure Observation #2, if more than one Nutrition Assessment has been completed during the inpatient visit, the measure will consider the most recent result.
